

Chapter 15: The Time Available

I suggest that we need to develop and build free-energy devices as a matter of urgency. This is because we may have only a limited amount of time before the assets of our present civilization become no longer available to us. We have a number of problems facing us and a quick assessment suggests that there is no way around these problems for most of us. Let me stress that what follows should be considered to be a personal opinion and no proof or evidence whatsoever will be presented so please feel free to ignore it all without a moment's hesitation. This subject attracts the most bizarre weirdoes and some incredibly outlandish theories, very few of which are likely to have the slightest basis in fact, so we need to stick with details which have some scientific, measurable basis, and avoid many of the weird ideas being put forward (typically by people who are selling books and DVDs on the subject).

When we are very young we believe that our personal world is completely safe and protected by our parents. When we grow up we discover that that impression was never actually correct. However, we now understand how the world works and we feel secure because we know that no matter what happens to us personally, the world rolls on unchanging, day after day, always the same. If we are lucky and live to become older again, we get to realise that the only certain and unchanging thing about the world **is** change. If we go back to a place which we knew well thirty years ago, we discover that it has changed so much that we have difficulty in recognising it. If we pay attention to what goes on around us, then we discover that the universe, while being visually magnificent, is a savage and devastatingly destructive place and our secure little place on this planet is actually only habitable because of protecting layers around the planet - the Van Allen radiation belt, the ozone layer, the atmosphere and the magnetic field which deflects most of the harmful emissions from the sun around to the poles. But then, those protecting factors will always be there - won't they? Well.... will they? The time has come to mature to another stage of awareness and realise that we have been living on borrowed time and that time is about to end. We now face several serious problems, and if you feel that "ignorance is bliss", then stop reading this and go and watch one of those wonderful TV programmes based on the assumption that you will find it amusing to watch people falling down and hurting themselves.

1. Unfortunately, there is a large 'planet' which may well be a very massive 'brown dwarf' star orbiting around our sun. It's orbit is inclined to the plane of the other planets in our system and it orbits once every 3,600 years or so, orbiting in the opposite direction to our main planets. It is probable that this planet originated outside our solar system and came in from outer space, collided with a planet, causing the asteroid belt, and the impact altered the motion of the planet, causing it to start orbiting around our Sun. The orbit is nothing whatsoever like the orbits of our main planets which are all in the one plane and are nearly circular. Instead, this orbit is a highly elongated ellipse, inclined at about thirty degrees to the plane of the other planets, and in addition to that, it is orbiting in the opposite direction to the other planets.

This planet goes by several different names, but for convenience, I will just use one - "Nibiru". Nibiru gives us further problems in that it's orbit will get changed every time it goes past, due to the gravitational effects of our other planets. This makes it **very** difficult to predict it's exact orbit on the next passage. Nibiru has orbited before and we are still here, so, short of a direct impact with the Earth, it is unlikely that mankind will get totally wiped out by Nibiru in the near future.

That is not to say that it has not already caused us serious problems. Three or four orbits ago, Nibiru came past and happened to line up with several of the other planets. The combined gravitational attraction of this grouping caused the water in the oceans to bulge upwards, leaving parts of the seabed visible and inundating major land masses. This "flood" is recorded in a vast number of ancient records, including the Bible which states that the flood covered the land for a period of five months and took a further three months to go down to near normal levels. I sincerely hope that this does not happen again when Nibiru passes this time, as Noah was a farmer, both low-tech and self-sufficient, while nowadays, large numbers of people are high-tech 'consumers' who are quite incapable of supporting themselves in a low-tech world with no fossil fuels, no telephones, no internet, no tap water, no shops, no electricity, no industry, no paid jobs, etc. We have a wholly unwarranted inclination to dismiss old records as "myths" but we should realise that these old records are frequently based on actual happenings and are not works of fiction. The massive flood of Noah's time is shown in the records of literally dozens of different cultures most of which will not have been in any kind of contact with each other in those days.

At this time (late in 2008), Nibiru has already passed Pluto and is orbiting around the Sun and will approach the Earth, coming up underneath the Sun in the year 2012. Unfortunately, other long-term events will also happen in 2012 and it is possible that these events may affect each other - but more of that later. A very rough not-to-scale diagram of the present situation is:

It is believed that the approach of Nibiru is causing the global warming which is being seen on the various planets in the solar system. On Earth, it is being argued that man made carbon dioxide emissions, especially from vehicles, is the cause of global warming. While it is an excellent goal to reduce emissions and improve air quality, man made carbon dioxide has nothing to do with global warming. The combined emissions of all 800,000,000 vehicles on the roads of the world accounts for about 1.7% of the carbon dioxide entering the atmosphere. The film "An Inconvenient Truth" points out the correlation between global temperature and carbon dioxide concentrations in the atmosphere. The historical record shows an undeniable correlation, **but** the film omits to point out that the carbon dioxide concentration follows the global temperature lagging behind it by some six hundred years. That is too vague a link anyway as carbon dioxide creation and absorption are affected by many other factors.

Knut Aabakken of Norway makes the following observations on the current carbon dioxide situation:

"David Archibald (<http://www.davidarchibald.info/papers/Climate%20Outlook%20to%202030.pdf>) published the graph shown here in 2006:

This graph clearly shows that even a big increase in the carbon dioxide level has almost no impact on atmospheric temperature. It has also been calculated that an increase to 620 ppm would give a temperature

increase of only 0.16°C. The graph shown above, together with its calculations should have ended any further discussion about reducing CO₂ emissions. However, this has most definitely not been the case.

For political and financial reasons, a decision has apparently been taken to keep up the pressure on carbon dioxide reductions, resulting in senseless investments on new technology for capture and storing carbon dioxide, "beautiful" windmills absolutely everywhere and the mandatory use of bio fuel. Don't forget about all the revenue which governments are getting from "climate taxes".

All these taxes and the massive spending of taxpayers money, really threatens the economic foundations of the whole of the western world, but worse still are the consequences of the commitment to bio fuel. This mad strategy has caused a near doubling of the cost of cooking oil and essential foods such as rice, because farmland is now being used for the production of bio fuel. These increases are hitting poor countries the worst as the people can no longer afford to pay the price of basic necessities.

If the intention of the IPPC and the world's politicians is to starve people to death, then they are definitely on the right track through their continued insistence on the supposedly harmful effects of carbon dioxide. In reality, the greenhouse gas which has the most effect is actually water vapour which accounts for about 98% of all warming. I wonder how the politicians are going to prevent water vapour from getting into our atmosphere !"

However, it seems almost certain that our Sun is being affected by Nibiru at this time. It appears that Nibiru has a mass of four or five times that of the Earth and it may have as many as five planets of its own, orbiting around it. This, of course, makes the prediction of the gravitational situation when it passes Earth on its loop back out into deep space, extremely difficult, especially since the gravitation of the Sun's other planets will affect the orbit of both Nibiru and it's planets between now and 2012. In that period, the Earth will orbit the Sun three or four times. To be able to predict the orbit of Nibiru, many measurements would need to be made between now and 2012. It is interesting to note that two underground grain repositories have already been set up and stocked, their stated aim being to be a reserve against any form of natural disaster, to allow these grains to be grown again after the disaster. Does that seem to you to be anything like what was done in Noah's time?

There is a certain amount of confusion as NASA has detected another small body outside the orbit of Neptune and they have named it "Eris". That body is not a problem but the coincidence of the discovery is causing some minor confusion. Eris is small, while Nibiru or "Planet X" is very big. A NASA press release in 1992 states "Unexplained deviations in the orbits of Uranus and Neptune point to a large outer solar system body of 4 to 8 Earth masses, on a highly tilted orbit, beyond 7 billion miles from the Sun". That is Nibiru and not Eris.

The effects caused by Nibiru passing by are not what you would expect. It creates increased heat and volcano activity in the nearby planets and the same sort of effects in our Sun. Solar system planets are already showing these effects and on Earth a strange situation is occurring. Increased volcanic action near the North pole is causing unusually large ice melting and global warming in the northern hemisphere, while increased precipitation in the southern hemisphere is causing lower than normal temperatures and global cooling. These effects are temporary as things will get a lot worse when Nibiru orbits back towards us. Then, the volcanic action will become severe, probably triggering the Yellowstone Park super-volcano and Sun flares will become so severe that the ozone layer and Van Allen radiation belt will be destroyed, removing the essential protection which they provide for life on Earth. A major proportion of sea life in the upper ocean layers will be destroyed, all green land vegetation and a third of all trees. This charming situation is very likely to be followed by a severe nuclear winter spanning some years and due to the dust in the upper atmosphere, it is likely that there will be no sunlight reaching the surface of the Earth. However, volcanic activity is the greatest source of carbon dioxide in the Earth's atmosphere, so that might actually offset much of the cold.

In passing, the "global warming caused by human activity" has no basis in reality and is just part of a scam to siphon off billions in taxpayer money.

This is a transcript of the web video from 'childofgod33' at <http://in.youtube.com/watch?v=ESt9YkaFe2w>

Follow The Money

I'm often asked "How do you know that this Nibiru thing is REAL?". I say ... "FOLLOW THE MONEY" Scoffers say "If this thing were real, then more people would know about it". When you follow the money you see that the US government is taking this threat seriously. They are spending immense sums to understand and cope with this threat.

How does NASA know about Nibiru? Well, like any government agency, NASA spent US tax dollars to find it. It's not just US tax dollars and European tax payers are footing the bill too and JAXA (Japan) has been spending lots of money - an estimated six billion spent since 2003. ESA (Europe) and CNES (France) have been spending money like a drunken sailor on leave. A good detective follows the money. In the early 1990's, NASA, ESA, CNES and JAXA started creating a new fleet of space-based solar observatories.

The interaction between our Sun and a massive object approaching it could present us with one of the greatest threats EVER. Earth has experienced violent storms, quakes, floods, etc. and a Solar alignment flare could reach the Earth in less than 18 hours.

Launched on 2nd December 1995, the Solar and Heliospheric Observatory (SOHO) from ESA has provided a never before seen view of the Sun.

New funding has extended its mission up to December 2009. In August 2006 NASA launched its Solar Terrestrial Relations Observatory "STEREO" spacecraft into orbit around the Sun.

In October 2006, NASA, ESA and JAXA, launched Solar-B (Hinode)

Pointed directly at Nibiru. Solar scientists have observed that magnetic features in the solar photosphere are **changing**. Did I mention that the orbit of Nibiru has it coming up behind the Sun?

NASA launched Proba-1 in October 2001 and the European Space Agency hopes to launch Proba-2 in the spring of 2008. By the way, ESA spent 2.9 billion Euros in 2007 alone and that is US \$4 billion at the current rate of exchange.

Some satellites have secret laser capabilities along with their known telecommunication abilities.

ESA is sending up Proba-2 as soon as possible and it has secret items aboard. NASA has the Solar Dynamics Observatory "SDO" scheduled for launch in August 2008.

More probes and telescopes pointed away from Earth. In August 2003, NASA launched the Spitzer Space Telescope.

Spitzer is the largest infrared telescope ever launched into space. NASA sent up the Hubble Space Telescope which was due to quit in 2007, but now it has been retro-fitted to continue to work until 2013 and all live feed from it is scrambled.

NASA has a space mission planned for 28th August 2008 to “service” the Hubble with secret hardware and software, plus special **heat shields**. The cost of the trip is US \$1.16 trillion, the Hubble repair cost about US \$900 million.

Hubble will take images of Nibiru as it comes closer. Not to be outdone, Japan joined in the fun. JAXA launched ASTRO-F, aka AKARI, aka IRIS, InfraRed Imaging Surveyor.

This is the second space mission for infrared astronomy in Japan as a joint venture with the UK, the US and the Netherlands.

This is the Herschel Space Observatory:

The ESA plans to launch the Herschel Space Observatory in October 2008.

NASA has for their own use, the Sophia Observatory Project:

Stratospheric Observatory For Infrared Astronomy (SOFIA)

The primary mirror being lifted into the Telescope Assembly inside the plane (July 2003)

These telescopes have been pointed at the heavens since their launch. In February 2007, NASA installed the South Pole Telescope "SPT" in Antarctica:

The South Pole Telescope is a secret project to study the “dark forces” . Not to be outdone, France announced the Concordia Observatory located in Antarctica, opened in 2005 and seeking Nibiru.

ESA launched CNES: COROT in December 2006, to search for habitable planets:

NASA's Wide-Field Infrared Survey explorer has got approval for it's construction and it is due for launch in 2009:

The powers that watch for this sort of thing are watching closely, but silently. The **reason** why all these satellites have very distinctive **infra-red technologies** is very important. Because of the dwarf star heat signature the easiest way to track Nibiru is by watching it's infrared images.

So, to recap:

All of the Space Agencies of the World have spent billions of tax payer's dollars to watch for the solar problems to increase because of a planetary body not formally known to our Astronomical bodies before the 1980's. As this planetary body known as Nibiru, or Planet X, comes into our solar system to perturb our nearby planets and disturb our own Earth, we can anticipate this planet's trajectory based on it's current location compared to where it was previously. They know that it is coming.

2. The second problem which faces us is the orbit of our Solar System which it is said will cross the plane of our galaxy late in the year 2012. This is an event which takes place once every 25,800 years. At first glance, this would seem to be harmless, but that may well be an uninformed assessment. Every sun emits radiation, most of it seriously harmful. Most of the suns in our local galaxy are so far away that we get very little radiation from them, certainly a low enough level to get by.

Unfortunately, the people who study these things say that there is very much intensified radiation along the plane of the galaxy and a concentrated gravitational field with so many astronomical bodies all lined up, and that when we cross that plane, then things will be different. Recently, astronomers were able to watch another solar system crossing the plane of the galaxy and see what happened to it, and in that case, there were massive solar flares.

Observations of another solar system which did that recently, showed that their sun flared up and created major radiation. If that happens to our Sun, which seems distinctly possible, then the effect may well be devastating for life on earth and will most definitely take out all communications. It is interesting to note that the US is investigating non-electronic methods of communications. However, please remember that as nobody living has been through this experience, we have no direct evidence and so it may well be a totally harmless experience.

3. We are overdue a planetary magnetic pole shift and nobody knows what effect that will have as we weren't around when it happened the last time. It is suggested that the shift will take place over a period of just eleven days and the magnetic poles have already started to shift in a way which is somewhat unusual. If the shift is gradual, then there will be no problem. If the shift is very rapid, then considerable upheaval will result. As there is nothing which you can do about it, just ignoring it seems a reasonable course of action.

4. All of Yellowstone Park in the USA is one super-volcano and when it blows, ash and gas will kill all Americans on the west side of North America within twenty minutes. It will also create an upper atmosphere dust cloud

which will cause darkness and winter for some years continuously. This is not a case of "if" but a case of "when" as it will definitely happen. It last happened 640,000 years ago and on average it happens every 600,000 so in geological terms, it is 40,000 years overdue. In theory, we need not worry as it could be another thousand years before it goes. A mainstream UK television documentary some years ago demonstrated how the Yellowstone ground is bulging upwards progressively. There is an unpublished report created for the US government which says that they believe that it will blow in the next five years, but it must be assumed that the conclusions of that report are a matter of opinion since, as far as I am aware, at this time there is no proven and reliable way of predicting an eruption of any kind.

Best case: Nibiru passes without causing any really major problem, and, the Solar System crosses the plane of the galaxy with no significant effect, and, the magnetic pole shift does not take place or does take place with no major problems resulting from it, and, Yellowstone Park does not blow in our lifetime. Overall result: apart from losing all communications for a period of time, life continues as it is doing now.

Worst case: Nibiru passing causes major sun flares which kill a really major percentage of the world's population, 4,500,000,000 being mentioned as the probable number of people killed. The stresses caused by Nibiru trigger the Yellowstone Park eruption, pushing large quantities of dust into the upper atmosphere, blanking out the Sun and causing a 'nuclear' winter which lasts for two or three years, possibly causing another ice age but probably offset by massive amounts of volcanic carbon dioxide emissions.

Nobody can do anything to prevent these catastrophic things happening, no matter what level of technology we have. There is, of course, far more information on these things, not all of which will be reliable. If you want to follow up on it, you could try:

It is possible that the earth's crust could slip round under the stress of a very close pass by Nibiru while the planet's core remains in position. There are detailed and accurate maps, many hundreds of years old, showing the coastline of Antarctica in great detail and interestingly, due to the very thick ice layer covering the land, we have only been able to confirm that coastline very recently with satellite images. This seems to lend some weight to the old legend of Atlantis, located near the Med, populated by a high-tech population, suddenly upset when the island moved position. It might be that there was a planetary crust shift which moved it to the present position of Antarctica, and inundated with an ice sheet. Not by any means certain, but there is usually some truth in old legends, and often a high degree of accuracy.

The most powerful people on earth have been aware of this problem for several decades. So far, they have established more than 130 deep underground bases of massive size and peopled them with individuals of their choice. Two underground grain repositories have been established quite openly and stocked with 2,000 varieties of grain. The reason stated is that they were set up to protect against 'any catastrophic earth event'. Many wealthy individuals have bought land in South America (and are probably digging in there). Bases have also been established on both the Moon and Mars in order to have a greater level of resilience. The people who built these bases do not admit that they exist.

This secret operation has been going on for several decades, while running the window-dressing acts of the Moon landing and the Space Shuttle much lower-tech operations, while having much more effective technology. The US, UK, Canadian and USSR governments are definitely in on this combined operation. One of the reasons for the fanatical opposition to the introduction of any kind of free-energy device is that understanding how to tap this unlimited energy leads very quickly to an understanding of how to create and use electrogravitic fields. No government anywhere would ever willingly allow members of the public to have access to UFO-style propulsion. If they did, then it would become impossible to police national borders, as any group of people could lift off from anywhere in the world, reach any country in just minutes, cross the border anywhere and cause whatever mayhem they wanted and be gone in minutes. Various governments have owned that style of propulsion for more than fifty years now although they deny this in spite of their stories and explanations being self-contradictory.

If you feel that all this is just too far-fetched to be real, then consider the description in the Bible of the ten "plagues" at the time of the Exodus of the people of Israel from slavery under the Egyptians. This story is told in other literature of the time as well, and the Egyptian documentation confirms the Bible record in all essential details as well as adding additional information. It is suggested, with a great deal of evidence, that these "plagues" were caused by a close fly-by of Nibiru or one of its satellites. The details as suggested in the book "Planet X Forecast and 2012 Survival Guide" by Jacco van der Worp, Marshall Masters and Janice Manning ISBN 1-59772-075-5.

Plagues:

1. "Water turned into blood". Iron-rich meteorites from the fly-by stain river water red with iron oxide and phosphorus-rich Schreibersite.
2. "Frogs". Schreibersite fed blue-green algae growth. This is deadly to life and takes the oxygen from the water, creating a deadly neurotoxin called microcystin which is a skin irritant, driving the frogs out of the water.
3. "Lice". Toads were also driven out of the water so their main food - lice, grew to plague level with their predators gone.
4. "Flies". More specifically, blood-sucking flies. With animals no longer able to stand submerged in water to protect themselves from these flies, there was a major expansion in the number of these flies.
5. "Cattle deaths". The blood-sucking flies carry malaria and other diseases and the bites are often sites for secondary diseases and these caused cattle fatalities.
6. "Boils". The Nile also served as a source for bathing water and the microcystin would have turned any minor scrapes on hands or feet into boils.
7. "Hail mixed with fire". This will have been the first plague chronologically and it is assigned to the Destroyer's "fire, hot stones and a vile smoke". Almost certainly material drawn in from the fly-by.
8. "Locusts". These eat well in excess of 80,000 tons of vegetation per day and when food gets scarce and they start bumping repeatedly into each other when feeding, a genetic swarm spot on the back leg causes them to swarm.
9. "Darkness for three days". The Destroyer or it's satellites filled the atmosphere with so many particles that they blocked the sunlight for three days and "midday was no brighter than night".
10. "Death of firstborn sons". The algae bloom in the rivers eventually produces sulphur dioxide which stays low in the air. The firstborn slept on the ground floor where it was cooler while the others slept on the roof - the second coolest place. The firstborn sons were subjected to more of the SO₂ and as well as that, they collected the daily grain allowance from the grain stores which would have been underground and so heavily contaminated with SO₂.

Do you feel that the plagues listed in the documentation of that time are just co-incidentally the same as would occur from a close fly-by? I don't.

The Human Angle:

Unfortunately, it is now becoming ever clearer that we will be lucky to reach 2012 unscathed as human factions are, quite deliberately, creating even bigger problems for us.

Please assume the following to be wholly unsubstantiated and highly dubious opinions. There is a lot of 'nut case' statements on the internet, so please understand that I might well be one of those 'nut cases'. However, I suggest that you consider and further research the following things:

1. There are a several powerful players on the world scene, who are at present engaged in a power struggle, based primarily around the USA. These include:
 - a. The Russians
 - b. The Chinese
 - c. The Japanese
 - d. Israel
 - e. The illuminati (the New World Order)
 - f. The Rothschild faction of the New World Order
 - g. The Rockefeller faction of the New World Order
 - h. The US military "white hat" good-guys faction.
 - i. One or more non-human groups. (The "greys" walk around quite openly inside the Pentagon. They are said to be native to this planet, but one wonders why they are not known to science when they have such a highly advanced level of technology.)

2. The present situation has become critical because the US, via the Rothschild's Federal Reserve, have been printing US money without having real assets to give value to those 'promissory note' dollar bills and that has effectively bankrupted the US, which now owes trillions to Japan and China. When the US economy fails it is liable to destroy or damage the entire world economy. Mind you, the world economy is actually a scam intended to enslave the world as a whole, holding everybody in economic slavery imposed by corruption and violence. This is given in detail later on.

The present manoeuvre of having national governments using public money to take over the debts of banks around the world is just the first step in establishing a visible world government under the group of people who are called "The New World Order" and so it should not be seen as a way out of our problems, but instead, the start of even greater problems.

3. The Rockefeller faction has been collecting and suppressing high-tech patent applications for at least fifty years now. Vast sums have been siphoned off in 'black ops' projects and it is reliably reported that they are at least fifty years, and possibly even a thousand years ahead of the technology seen publicly. They, and several other governments have had flying saucers for decades now. They also have equipment which can make a person hear what you say inside his head directly, without sound waves being used. With repeated use, this can control the actions of an individual.
4. The Rockefeller faction is allied with Israel and has already made two separate attempts to nuke Iran. The first attempt was foiled by the 'white hat' military in Iraq who refused to allow them to refuel the bombing aircraft in Iraq. They then, very recently, tried to bypass that obstacle by refuelling in Georgia, but the Russians invaded very promptly, destroying the armed forces of Georgia and blocking the attack.
5. The Rockefeller faction want to reduce the world population by 90% as it would then be easier to control the remaining people. They are working solidly on this and have built more than a hundred concentration camps all over the USA. These camps can hold a million people and they are said to have 190,000 mercenaries on standby. Large crematoriums have been built and vast numbers of plastic containers made, each of which, it is alleged, is intended to be used as a temporary coffin holding the remains of three or four people prior to cremation. Recently, the 'Feds' bought up every last can of canned butter and every freeze-dried meal that they could lay their hands on, which suggests that they believe that this situation may come about very soon.
6. George Bush has just been replaced. It is highly likely that every Presidential candidate is also a New World Order member so that it does not really matter who supposedly wins the election. In October, economic pre-election stunts were carried out designed to manipulate and weaken various countries, pick up many assets at knock-down prices, boost oil revenues and then drop the oil price just ahead of the election. The main objective here was another step towards a world government based on economic ties more than anything else.
7. It is said that the Rockefeller faction has built more than a hundred and thirty bases deep underground in the US. The existence of some of the US bases has been confirmed by independent sources. It seems likely that these bases are to keep them out of harm's way while violent activities take place. The US Congress has been assured in closed session, that there is shelter for them and their families when this activity starts but this assurance is highly doubtful as there is already a secret government in place. The Rockefeller faction believes that their raising of food and oil prices should already be sufficient to make one billion people die of starvation - the first step towards their goal of killing about five billion people and at this moment, 967,000,000 are faced

with starvation. However, the number of bases was 131 in 1995 with an additional two per year being added, which would suggest that the present number is likely to be at least 145, each being two cubic miles on average and located at a depth of 5,000 feet down or more. Details of these have been given by Phil Schneider who was involved in the construction of thirteen of the interconnecting tunnels which are some twenty feet wide and twenty-eight feet tall. Every base is connected to every other base by these tunnels. The bases in Mexico and in Canada are not included in the count of 145.

8. Another weapon which is being used in this power struggle is the HAARP system based in Alaska. It is said, with considerable justification, that the Christmas tsunami, the China and Japan earthquakes were caused deliberately. There is absolutely no question that the hurricane which destroyed New Orleans was being steered by a one billion watt beam and that steering beam was looked for and detected by one of the EVGRAY forum members. Remember that "Weather Engineering" was specifically excluded from SALT -- the Strategic Arms Limitation Treaty. "Weather Engineering" is used as a weapon, and from the Rockefeller faction viewpoint, it can also help by killing large numbers of people.
9. I gather that China and Japan have made it clear that if Iran is nuked, then they will nuke Israel out of existence. Generally speaking, predicting what will happen in the immediate future is not a simple matter by any means, though it is distinctly possible that the Nibiru fly-by will be left to take out those people not taken into the underground bases.

With regard to the underground bases, we need to be realistic here. Put yourself in the place of the top governing people in your country. You have just been informed by you scientific staff that there will be solar flares late in 2012 and that they will destroy civilisation as we know it. Only people deep underground will be able to survive without major problems. So, what would you do? What could you do? If you announce the facts, then the rule of law would break down and society would break down within days.

What could you do to save everyone? Probably nothing. Could you do something to ease the situation? Well, if the only protection is underground shelters, then you could start building them, but you would have to do it in secret in order not to cause the premature breakdown of society. All right, so you start building as many large underground shelters as possible. Could these house everyone in the world? Not a chance - there are far too many people. Congratulations, you have just landed yourself with one of the most unpleasant tasks that anyone could have - deciding who will be invited to take shelter. Ain't life fun when you are at the top !! OK, it's your decision, so who do you pick? Say you could accommodate 10% of the world's present population. That means that for each person you choose, nine others are going to be excluded, so have a nice day while you choose - good fun isn't it?

Well, after being underground for several years, you will need to start building a new infrastructure and society on the surface, and who would you need to survive the intervening years and do the rebuilding? Presumably, young, energetic people with appropriate skills: medical people, engineering and scientific people, people experienced in manufacturing processes, food production, education and other essential services. Ideally, you want young, fertile people who can start building up the population again. So, bottom line, can you really censure people for doing this? I can't and I don't qualify for selection. I just wish them well in their project.

There is a great deal of information on this subject and much of it is difficult to believe. If you want to research further, the try the <http://www.projectcamelot.org/2008.html> website, and perhaps, pay some attention to the information at http://www.projectcamelot.org/audio_interviews.html, although, as already mentioned, it is distinctly possible that much of the web-based information is not wholly reliable.

While I do not agree with the conclusions reached in the video presentation which can be seen on the internet at <http://video.google.com/videoplay?docid=7065205277695921912>, here are some of the relevant facts quoted in that video:

In a world where 1% of the population owns 40% of the planet's wealth, in a world where 34,000 children die every single day through poverty and preventable diseases, and where 50% of the world's population lives on less than US \$2 per day, one thing is clear: something is very wrong.

And whether we are aware of it or not, the lifeblood of all of our institutions, and therefore this society itself, is money. Therefore, understanding this institution of monetary policy is critical in understanding why our lives are the way that they are. Unfortunately, economics is often viewed with confusion and boredom. Endless streams of financial jargon coupled with intimidating mathematics, quickly deters people from attempts to understand it.

However, the complexity associated with the financial system is a mere mask intended to conceal one of the most socially paralysing structures which man has ever endured.

A number of years ago, the Central Bank of the United States of America, "the Federal Reserve", produced a document entitled "Modern Money Mechanics". This publication detailed the institutionalised practice of money creation as utilised by the Federal Reserve and the web of global banks which it supports. On the opening page, the document states its objectives: "The purpose of this booklet is to describe the basic process of money creation in a 'fractional reserve' banking system". It then proceeds to describe this practice through various banking practice terminologies. A translation of it goes something like this:

The United States government decides it needs some money, so it calls up the Federal Reserve and requests, say, \$10,000,000,000. The Fed replies saying "Sure, we will buy \$10 billion in government Bonds from you". So the government takes some pieces of paper, paints some official-looking designs on them and calls them "Treasury Bonds". Then it puts a value on them of \$10 billion and sends them over to the Feds. In turn, the people in the Fed draw up a series of impressive looking pieces of paper themselves, only, this time, calling them Federal Reserve notes, also designated with a value of \$10 billion. The Feds then take these notes and trade them for the Treasury Bonds. Once this trade is complete, the government then takes the \$10 billion in Federal Reserve notes and deposits them in a bank account, and on doing this, the \$10 billion becomes legal tender money, adding \$10 billion to the US money supply. And there it is: \$10 billion in new money has been created. Of course, this example is a generalisation because in reality, this transaction would occur electronically, with no paper used at all. In fact, only 3% of the US money supply exists in physical currency and the other 97% exists in computers alone.

Now, Government Bonds are by design, instruments of debt, and when the Fed buys these bonds with money which essentially it created out of thin air, the government is actually undertaking to pay back that money to the Fed - in other words, the money was created out of debt.

This mind-numbing paradox that money or value can be created out of debt or liability, will become more clear as we continue this exercise. So, the exchange has been made and \$10 billion sits in a commercial banking

account. Here, is where it gets really interesting, for as based on the fractional reserve practice, that \$10 billion deposit instantly becomes part of that bank's reserves, just as all deposits do. And as regarding the fractional reserve requirements, as stated in Modern Money Mechanics, a bank must maintain legally required reserves equal to a prescribed percentage of its deposits. It then quantifies this by stating "under current regulations, the reserve requirement against most transaction accounts is 10%". This means that with the \$10 billion deposit, 10% or \$1 billion is held as the required reserve, while the other \$9 billion is considered as an excessive reserve and can be used as the basis for new loans. Now it is logical to assume that this \$9 billion is literally coming out of the original \$10 billion deposit, however, this is actually not the case. What really happens is that the \$9 billion is actually created out of thin air on top of the original \$10 billion deposit. This is how the money supply is expanded, as stated in Modern Money Mechanics, "of course they (the banks) do not really pay out loans from the money they receive as deposits. If they did this, no additional money would be created. What they do when they make loans is to accept promissory notes in exchange for credits in the borrower's transaction accounts". In other words, the \$9 billion is created out of nothing simply because they have a demand for that loan and there is a \$10 billion deposit to satisfy the reserve requirements.

Now, let's assume that somebody walks into this bank and borrows the newly-available \$9 billion, they will then most probably take that money and deposit into their own bank account. The process then repeats, as that deposit becomes part of that bank's reserve, and while 10% is held as a reserve, the remaining 90% or \$8.1 billion is now available for more newly created loans. And of course, that \$8.1 billion can be lent out, creating a further \$7.2 billion which in turn can create a further \$6.56 billion, ... This money deposit/loan-creation cycle can technically go on to infinity. The average mathematical result is that \$90 billion can be created on top of the original \$10 billion. In other words, for every deposit that ever occurs in the banking system, nine times that amount can be created out of thin air.

So, now that we understand how money is created by this fractional-reserve banking system, a logical, yet elusive, question might come to mind: "What is actually giving this newly traded money value?". The answer: "the money which already exists". The new money essentially steals value from the existing money supply. The total money pool is being expanded irrespective for the demand for goods and services, and as the demand and supply balance finds equilibrium, prices rise, diminishing the purchasing power of each individual dollar. This is generally referred to as **Inflation** and inflation is essentially a hidden tax on the public.

The fractional-reserve banking system is inherently inflationary. One dollar in 1913 had the equivalent value of \$21.60 in 2007. That is a 96% devaluation since the Federal Reserve came into existence. If this reality of perpetual and continuous inflation seems absurd and economically self-defeating, then hold that thought as "absurd" is an understatement with regard to how the US financial system really operates. For, in that financial system, money is debt, and debt is money. The more money there is, the more debt there is and the more debt there is, the more money there is.

To put it a different way, every single dollar in your wallet is owed to somebody by somebody. Remember, the only way that money can come into existence is from loans, therefore if everyone in the country, including the government, were able to pay off all debts then there would not be one dollar in circulation. In September 1941, the Governor of the Federal Reserve stated: "If there were no debts in our money system, there wouldn't be any money".

In fact, the last time in American history the National Debt was paid off in full was in 1835 when President Andrew Jackson shut down the Central Bank which preceded the Federal Reserve. He stated: "The bold efforts the present bank has made to control the Government ... are but premonitions of the fate that awaits the American people should they be deluded into a perpetuation of this institution or the establishment of another like it". Unfortunately, this message was short-lived and the bankers installed another Central Bank in 1913, calling it the Federal Reserve, and as long as this institution exists, perpetual debt is guaranteed.

We now have the added factor of **Interest**. Every single dollar which exists has to be repaid to a bank with interest added as well. But, if all money is borrowed from the Central Bank, and is expanded by commercial banks through loans, only what would be referred to as "the principal" is being created in the money supply. So, from where does the money needed to pay this interest come? Nowhere. It doesn't exist. The ramification of this are staggering. The amount of money owed back to the banks will always exceed the amount of money in circulation. This is why inflation is a constant in the economy. New money is always needed to cover the perpetual deficit built in to the system, caused by the need to pay the interest. This ensures that defaults and bankruptcy are guaranteed to occur and there will be foreclosures. This always transfers true assets from the individual to the banks. If you are unable to pay your mortgage, then they will take your property. This is particularly annoying as the money which the bank lent you in the first place, didn't even legally exist.

In 1969, there was a Minnesota court case involving a man named Jerome Daly who was challenging the foreclosure of his home by the bank which provided the loan to purchase it. His argument was that the mortgage contract required both parties (he and the bank) to put up a legitimate form of property for the exchange. In legal

language, this is called “consideration”. Mr Daly explained that the money was, in fact, not the property of the bank as it was created out of nothing as soon as the loan agreement was signed. Remember what Modern Money Mechanics stated about loans: “What they do when they make loans is to accept promissory notes in exchange for credits ... reserves are unchanged by the loan transactions, but the deposit credits constitute new additions to the total deposits of the banking system”. In other words, the money doesn’t come out of their existing assets, the bank is simply inventing it, putting up nothing of it’s own, except for a theoretical liability on paper. As the court case progressed, the bank’s President, Mr Morgan, took the stand and the judges memorandum records that the “Plaintiff admitted that it, in combination with the Federal Reserve Bank ... did create the entire \$14,000 in money in credit upon it’s own books by bookkeeping entry ... the money and credit first came into existence when they created it. Mr Morgan admitted that no United States Law or Statute existed which gave him the right to do this. A lawful consideration must exist and must be tendered to support the Note” ... The jury found that there was no lawful consideration, and I agree, only God can create something of value out of nothing.” On this finding, the court rejected the bank’s application for foreclosure and Mr Daly kept his home.

The implications of this court decision are immense. Every time you borrow money from the bank, whether it is a mortgage loan or a credit card charge, the money given to you is not only counterfeit, but it is an illegitimate form of ‘consideration’ and hence voids the contract to repay as the bank never had the money as property to begin with. Unfortunately, such legal realisations are suppressed and ignored and perpetual wealth transfer and perpetual debt continues. This brings us to the ultimate question: **“Why?”**

During the American Civil War, President Lincoln bypassed the high-interest loans offered by the European banks and decided to do what the Founding Fathers advocated, which was to create an independent and inherently debt-free currency. It was called the “greenback”. Shortly after this measure was taken, a private document circulated between British and American banking interests stated “... slavery is but the owning of labour and carries with it the care of the labourers, while the European plan ... is that capital shall control labour by controlling wages. This can be done by controlling the money. It will not do to allow the greenback as we cannot control that”. - The Hazard Circular, July 1862.

The fractional reserve policy perpetrated by the Federal Reserve which has spread in practice to the great majority of banks in the world, is, in fact, a system of modern slavery. Think about it: money is created out of debt. What do people do when they earn debt? They submit to employment to pay it off. But if money can only be created out of loans, how can society ever be debt-free? It can’t, and that’s the point. And it is the fear of losing assets coupled with the struggle to keep up with the perpetual debt and inflation in the system, compounded by the inescapable scarcity in the money supply itself, created by the interest which can never be repaid, that keeps the wage slave in line, powering the pyramid which only benefits the elite at the top of the pyramid. At the end of the day, for whom are you really working? The banks. Money is created in a bank and inevitably ends up in a bank. They are the true masters along with the corporations and governments which they support. Physical slavery requires people to be housed and fed, economic slavery requires people to house and feed themselves.

It is one of the most ingenious scams for social manipulation ever invented, and at it’s core, it is an invisible war waged against the population. Debt is the weapon used to conquer and enslave societies and interest is its prime ammunition. As the majority walks around, oblivious to this reality, banks in collusion with governments and

corporations continue to expand and perfect their tactics of economic warfare, spawning new bases such as the World Bank and the International Monetary Fund and introducing a new kind of soldier - the economic hitman.

Here is the testimony of one of those economic hitmen, John Perkins:

We, the economic hitmen, are the ones really responsible for creating the first really global empire, and we work many different ways. Perhaps the most common is that we will identify a country which has resources which our corporations covet, such as oil, and then arrange a huge loan to that country from the World Bank or one of its sister organisations. But the money never actually goes to the country, instead, it goes to our big construction corporations to build infrastructure projects in that country, like industrial power plants, things which benefit a few rich people in that country (in addition to our corporations), but really don't help the people involved, however those people and the whole country are left holding a huge debt so big that they can't repay it, which is the whole plan - that they can't repay it. So we economic hitmen go back to them and say "listen, you owe us a lot of money, you can't repay it, so sell your oil real cheap to our oil companies, allow us to build a military base in your country or send troops to some place in the world to support our troops in somewhere like Iraq, or vote with us in the UN to have their electric utility company privatised, or their sewage system privatised and sold to US corporations or other multinational corporations, so there is a whole mushrooming thing and it's the way that the World Bank and the International Monetary Fund operate to put a whole country in debt with such a big debt that it can't pay it, so you then offer to refinance that debt and get them to pay even more interest and you demand this 'quid pro quo' or 'conditionality' or 'good governance' which means basically that they have to sell off their resources, including their social services and utility companies, their school systems sometimes, their penal systems, their insurance systems to foreign corporations. So, it's a double, triple, quadruple whammy.

Examples:

Iran 1953: The precedent for economic hitmen began back in the early 1950s when the democratically elected Prime Minister of Iran, Dr Mohammad Mossadegh, was considered to be a hope for democracy - Time

Magazine's Man of the Year. One of the policies which he ran on was the idea that the oil companies needed to pay the Iranian people a lot more for the oil which they were taking out of Iran. We didn't like that, of course, but we were afraid to do what we would normally do, which is to send in the military. Instead, we sent in one CIA agent, a relative of President Roosevelt. He went in with a few million dollars and was very efficient and effective and in a short amount of time he managed to get Mossadegh overthrown and brought in the Shah of Iran to replace him. It was extremely effective. So back here in the United States, people in Washington looked around and said "wow - that was easy and cheap!" So this established the whole new way of manipulating countries and creating empire. The only problem with Roosevelt was that he was a card-carrying CIA agent and if he had been caught, the ramifications would have been pretty serious. So, very quickly at that point a decision was made to use private 'consultants', to channel the money through the World Bank, the IMF or one of the other such agencies, bring in people like me who worked for private companies, so that if we got caught, there would be no government ramifications.

Guatemala 1954: When Arbenz (Jacobo Arbenz Guzman) became President of Guatemala, the country was very much under the thumb of the United Fruit Company, the big international corporation and Guzman ran under the strategy of giving the land back to the people. When he was elected he started implementing those policies of giving the land back to the people. United Fruit didn't like that so much, so they hired a Public Relations company in the United States mounted a huge campaign to convince the people of the US, the press of the US and the Congress of the US that Arbenz was a Soviet puppet and if we allowed him to stay in power the Soviets would have a foothold in this hemisphere, which, at that time, was a huge fear on everybody's minds, so to make a long story short, out of this public relations campaign came a commitment on the part of the CIA and the military to take this man out, and in fact, we did. We sent in planes, we sent in soldiers, we sent in jackals, we sent in everything to take him out, and we did take him out. And as soon as he was removed, his successor reinstated the links to the big corporations including United Fruit.

Ecuador 1981: Ecuador for many, many years was ruled by pro-US dictators, often relatively brutal. Then it was decided that they were going to have a truly democratic election Jaime Roldos (Aguilera) ran for office and his

main goal, he said, as President was to make sure that Ecuador's resources were used to help the people. And he won, overwhelmingly, by more votes than anyone has ever won anything in Ecuador and he began to implement these policies to make sure that the profits from oil went to help the people. Well, we didn't like that in the United States. I was sent down as one of several economic hitmen to change Roldos, to corrupt him, to bring him around, to let him know "you know, you and your family can get very rich if you play our game but if you but if you continue to try and keep these policies you promised, then you are going to go". He wouldn't listen. He was assassinated "Ecuadorian Leader Dies in Plane Crash". As soon as the plane crashed, the whole area was cordoned off. The only people allowed in were the US military from a nearby base and some of the Ecuadorian military. When an investigation was launched, two of the key witnesses died in car accidents before they had a chance to testify. A lot of very, very strange things went on around the assassination of Roldos. I, like most of the people who really looked at this case had absolutely no doubt that it was an assassination and of course, in my position of an economic hitman, I was expecting something to happen to Jaime, whether a coup or an assassination I was sure that he would be taken down as he was not being corrupted, he would not allow himself to be corrupted the way we wanted to corrupt him.

Panama 1981: Omar Torrijos President of Panama was one of my favourite people. I really, really liked him, he was very charismatic and he really wanted to help his country. When I tried to bribe him, to corrupt him, he said "look, John, he called me Juanita, look Juanita, you know, I don't need the money, what I really need is for my country to be treated fairly. I need the United States to replay the debts which you owe my people for all the destruction you have done here. I need to be in a position to help other Latin American countries with their independence and be free of this terrible presence from the North. You people are exploiting us so badly. I need to have the Panama Canal back in the hands of the Panamanian people. That's what I want. So leave me alone, don't try to bribe me". It was in 1981 and in May Jaime Roldos was assassinated and Omar was very aware of this. He got his family together and said "I'm probably next, but it is ok because I've done what I came here to do, I've renegotiated the Canal, the Canal will now be in our hands". He had been renegotiating the treaty with Jimmy Carter:

In June of that same year, just a couple of months later, he also went down in an aeroplane crash which there is no question was executed by CIA jackals. There is a tremendous amount of evidence, one of Tarrijas' security guards handed him, at the last moment as he was getting on the plane, a small tape recorder which contained a bomb.

Venezuela 2002: It is interesting to me how this system has continued pretty much the same way for years and years and years except the economic hitmen get better and better and better. Then we come up with, very recently, what happened in Venezuela in 1998 when (Hugo Rafael) Chavez gets elected, following a long line of Presidents who were very corrupt and who basically destroyed the economy of the country, and Chavez was elected following all of that. Chavez stood up to the United States demanding that Venezuela oil be used to help the Venezuelan people. Well we didn't like that in the United States, so in 2002, a coup was staged, and there is no question in my mind or in most other people's minds, that the CIA was behind that coup. The way that coup was fermented was very effective, like Colonel Roosevelt had done in Iran - paying people to go out into the streets to riot, to protest and say that Chavez is very unpopular. You know, if you can get a few thousand people to do that, television can make it look like the whole country and things start to mushroom, except in the case of Chavez, he was smart enough and the people were so strongly behind him that they overcame it, which was a phenomenal moment in the life of Latin America.

Iraq 2003: Iraq, actually, is a perfect example of the way the whole system works. We economic hitmen are the first line of defence. We go in and try to corrupt governments and get them to accept these huge loans which we then use as leverage to basically own them. If we fail, as I failed in Panama with Omar Tarrijas, and in Ecuador with Jaime Roldos, men who refused to be corrupted, then the second line of defence is we send in the jackals and the jackals either overthrow governments or they assassinate and when that happens and a new government comes in, boy, it's going to toe the line as the new President knows what will happen if he doesn't. And in the case of Iraq, both of those things failed and the economic hitmen were not able to get through to Saddam Hussein although they tried very hard. We tried very hard to get him to accept a deal but he wouldn't accept it and so the jackals went in to take him out but they couldn't do it as his security was very good. After all, he had at one time worked for the CIA and been hired to assassinate a former President of Iraq and failed, but he knew the system. So, in 1991 we send in the troops and we take out the Iraqi military, assuming that at that point that Saddam is going to come around. We could, of course, have taken him out at that time, but we didn't want to as he is the

kind of strong man that we like, able to control his people and keep pumping oil for us. But when we took out his military he didn't come around so the economic hitmen go back in the 90s without success. If they had had success, he'd still be running the country - we'd be selling him all the fighter jets he'd want, but they didn't have success. The jackals couldn't take him out again, so we sent the military in once again and took him out, and created for ourselves very lucrative reconstruction deals to rebuild a country which we had essentially destroyed - which is a very good deal if you own a construction company - a really big one. So, Iraq shows the three stages: the economic hitmen - failed there, the jackals failed there, so as the final measure, the military goes in.

And in that way, we have really created an empire, but we have done it very, very subtly, it's clandestine. All the empires in the past were built by the military and everybody knew they were building them. The British knew they were building it, the French, the Germans, the Romans, the Greeks - they were all proud of it and they always had some excuse like "spreading civilisation", or spreading some religion, something like that, but they knew they were doing it. We don't. The majority of the people in the United States have no idea that we are living off the benefits of a clandestine empire, that today there is more slavery in the world than ever before.

You may have to ask yourself if it's an empire, then who's the Emperor? Obviously, our Presidents in the United States are not Emperors. An Emperor is someone who is not elected, does not serve a limited term, and who doesn't report to anyone. So you can't classify Presidents that way. But we do have what I consider to be the equivalent of the Emperor in what I call the "Corporatocracy". The Corporatocracy is this group of individuals who run our biggest corporations and they really act as the Emperor of this empire. They control our media (either by direct ownership or by advertising), they control most of our politicians because they finance their campaigns, either through corporations or through personal donations. They are not elected, they don't serve a limited term, they don't report to anybody, and at the very top of the Corporatocracy, we can't tell if the person is working for a corporation or for the government as they are always moving back and forth, so you get a guy who is one moment the president of a big company like Halliburton and the next moment he's the Vice President of the United States, or the President who is in the oil business and this is true whether you get Democrats or Republicans in the office, you have them moving back and forth through the revolving door, and in a way, our government is invisible a lot of the time as it's policies are carried out by a corporation on one level or another, and then again, the policies of the government are basically forged by the Corporatocracy and then presented to the government and become government policies. So, it is an incredibly cosy relationship. This isn't a "conspiracy theory" kind of thing, these people don't have to get together and plot to do things, they all basically work under one primary assumption, and that is that they must maximise profits regardless of the social and environmental costs.

This process of manipulation by the Corporatocracy, through the use of debt, bribery and political overthrow, is called "Globalisation". Just as the Federal Reserve keeps the American people in a position of indentured servitude, through perpetual debt, inflation and interest, the World Bank and International Monetary Fund fulfil this role on a global scale.

At the present time, the price of oil has dropped from \$145 per barrel to under \$50 per barrel. This seemed to be an impossibility just a few weeks ago, but the price is being manipulated by the people who are known as "The New World Order". A man who claims to have access to the agenda of these people, announced the drop to \$50 per barrel oil price back in June 2008 and was laughed at. Now that it has happened, people are not laughing any longer. He is now supplying substantial further information and he states that the New World Order people who effectively run the US government, Federal Reserve, Stock Exchange, banks, etc. have the following agenda for the immediate future:

1. They intend to hold the price of oil down to around \$50 per barrel for the next 6 to 12 months and then raise it to a very high level. The present wholesale oil price is \$1.15 per US gallon delivered to the filling stations. The objective of this price drop is to bankrupt the Arab oil-producing nations. This is a deliberate act of economic warfare.
2. They intend to boost the US stock market to a level of 14,000 over the next 12 months and then drop it suddenly. The objective is to try to destroy the American middle-class by creating a financial collapse that will take years to overcome. If you think that this is impossible, then consider the present position of the people of Iceland. Iceland declared bankruptcy recently and it's currency fell from 65 krona per US dollar to 130 krona per US dollar. People lost their savings overnight. Prices are soaring. Banks are limiting borrowing. Salaries have been cut. Working hours have been cut and there have been mass layoffs of workers. Doing business abroad is very difficult and Icelandic people no longer holiday abroad.

On 3rd February 2009, ITV News International Editor, Bill Neely said:

“On my last trip to Iceland, it had the highest living standard in the world. Not my opinion- that was the view of the United Nations. It was, until four months ago, the fifth richest country on earth per head of population and the small population of 300,000 was having the best of times. That was until 8th October. This week I am seeing a very different Iceland. In the weeks since, unemployment has gone up from one per cent to ten, and rising.

The country has seen riots with the police using tear gas for the first time in sixty years. The windows of the world's oldest parliament are smashed. Inflation is now at 22 per cent; interest rates at a crippling 18 per cent. As I walked down the main street of Europe's most Northerly capital Reykjavik, Iceland's crisis isn't so visible. Shops have closed and everything is on sale, yes, it could be Britain. Until I realised that everything I was looking at was borrowed or bankrupt or drowning in debt - the people, the cars, the banks, the businesses. It is **a country that mortgaged its future on the roll of a dice by a few high flyers** and lost. People shuffle past banks that have gone bust - every one of them. The lights are still on, there are people inside but there's no money.”

If you think that it is impossible for that to happen in the UK or USA, then think again. The USA was the very bottom country in the list of World Trade Imbalances for 2007, that being the most recent completed trading year. In 2007, the US had a trade deficit of US \$816,000,000,000 plus a Federal Debt of \$9,700,000,000 to other countries, plus a Federal Debt to Americans which raises that figure to \$53,000,000,000. This situation has been deliberately manoeuvred by the New World Order people in preparation for their planned financial attack on the American people, so please don't think that what happened to Iceland can't happen to the USA. The New World Order people are planning exactly that and their timetable is for US financial collapse within a year or so. Becoming self-sufficient would be a very good idea.

If you live outside the USA and think that a US economic collapse will not affect you, then I suggest that you think again as all of the financial systems worldwide are interlinked and there will be a chain reaction across the world. The International Monetary Fund has lent UK banks £168,000,000,000, does this perhaps suggest that the aim might be to push the UK into the same bankrupt situation as Iceland?

If you want to check the source of this information, then try:

<http://www.youtube.com/watch?v=MzO8av9ey6I&feature=related>

<http://www.youtube.com/watch?v=gJhOC3iCvTk&feature=channel>

http://www.youtube.com/watch?v=Yic_knhoC1Q&feature=related

One other thing which you should perhaps note in connection with this is the World Trade Imbalances for the last available full trading year, namely 2007. The source of this information is the CIA World Fact Book which lists

The 2007 World Trade Imbalances (Source: the CIA World Fact Book)

This lists 224 countries in the world, showing the relative values of their total imports and exports for the year. Only 64 of these countries have a positive balance with exports outweighing imports. I found some of the results to be startling, and here are some of the entries:

1. China	\$315,700,000,000
2. Germany	\$245,000,000,000
3. Saudi Arabia	\$148,830,000,000
4. Russia	\$104,600,000,000
5. Japan	\$104,500,000,000
6. Norway	\$61,290,000,000
7. U.A.E.	\$55,000,000,000
8. Singapore	\$54,600,000,000
9. Netherlands	\$52,900,000,000
10. Canada	\$46,200,000,000
11. Kuwait	\$42,090,000,000
12. Brazil	\$40,000,000,000

13. Malaysia	\$39,500,000,000
14. Indonesia	\$33,070,000,000
15. Angola	\$32,030,000,000
16. Algeria	\$32,000,000,000
17. Ireland	\$31,400,000,000
18. Iran	\$30,260,000,000
19. Taiwan	\$27,400,000,000
20. Libya	\$26,000,000,000
21. Thailand	\$26,000,000,000
22. Venezuela	\$23,710,000,000
23. Chile	\$23,650,000,000
24. Nigeria	\$23,590,000,000
25. Finland	\$23,360,000,000
26. Sweden	\$19,600,000,000
27. Qatar	\$18,090,000,000
28. Switzerland	\$17,900,000,000
29. Puerto Rico	\$17,800,000,000
30. Azerbaijan	\$15,225,000,000
31. Kazakhstan	\$15,140,000,000
32. South Korea	\$14,700,000,000
33. Iraq	\$13,300,000,000
34. Ivory Coast	\$12,363,000,000
35. Argentina	\$12,010,000,000

.....

217. Turkey	-\$46,800,000,000
218. France	-\$52,100,000,000
219. Greece	-\$56,880,000,000
220. India	-\$79,400,000,000
221. Spain	-\$121,200,000,000
222. The E.U.	-\$136,000,000,000
223. The U.K.	-\$175,400,000,000
224. The U.S.A.	-\$816,000,000,000

You will notice that Saudi Arabia is third of the list with a very satisfactory trade balance. What is not immediately seen is that they have major undertakings in hand which leave them vulnerable and the vast bulk of their sales is oil. The price of a barrel of oil on the international market needs to be US \$80 for Saudi Arabia to be financially viable, which is why the New World Order people want to hold that price down to \$50 per barrel for a long period. Charming people, aren't they?

The Economic Techniques

The following is an excerpt from a document, dated May 1979, and which appears to be a statement of the methods and techniques used in the economic warfare which is being waged against all ordinary people at this time. Let me emphasise that these are not my words but that I am quoting the contents of an old and unverified document of unknown origin. Anonymous documents are a standard method of spreading disinformation, however, the statements quoted below are included because they have every appearance of being a factual New World Order strategy already being implemented.

Top Secret

Silent Weapons for Quiet Wars, An introductory programming manual, Operations Research Technical Manual TM-SW7905.1 This publication marks the 25th anniversary of the Third World War, called the "Quiet War", being conducted using subjective biological warfare, fought with "silent weapons." May 1979

Security

It is patently impossible to discuss social engineering or the automation of a society, i.e., the engineering of social automation systems (silent weapons) on a national or worldwide scale without implying extensive objectives of social control and destruction of human life, i.e., slavery and genocide. Whenever any person or group of persons in a position of great power and without full knowledge and consent of the public, uses such knowledge and methodologies for economic conquest - it must be understood that a state of domestic warfare exists between that person, or group of persons, and the public. The solution of today's problems requires an approach which is

ruthlessly candid, with no agonizing over religious, moral or cultural values.

Historical Introduction

Silent weapon technology has evolved from Operations Research ("OR"), a strategic and tactical methodology developed under the Military Management in England during the Second World War. The original purpose of Operations Research was to study the strategic and tactical problems of air and land defence with the objective of effective use of limited military resources against foreign enemies (i.e., logistics). It was soon recognised by those in positions of power that the same methods might be useful for totally controlling a society, but better tools were needed.

Social engineering (the analysis and automation of a society) requires the correlation of great amounts of constantly changing economic information (data), so a high-speed computerised data-processing system was necessary which could predict when society would arrive at the point of capitulation. Mechanical computers were too slow, but the electronic computer fills the bill. The next breakthrough was the development of the simplex method of linear programming in 1947 by the mathematician George B. Dantzig. Then in 1948, the transistor, promised great expansion of the computer field by reducing space and power requirements.

With these three inventions, those in positions of power strongly suspected that it was possible for them to control the whole world. Immediately, the Rockefeller Foundation got in on the ground floor by making a four-year grant to Harvard College, funding the Harvard Economic Research Project for the study of the structure of the American Economy. One year later, in 1949, The United States Air Force joined in. In 1952 the grant period terminated, and a high-level meeting of the Elite was held to determine the next phase of social Operations Research. The Harvard project had been very fruitful, as is borne out by the publication of some of its results in 1953 suggesting the feasibility of economic (social) engineering. (Studies in the Structure of the American Economy - copyright 1953 by Wassily Leontief, International Science Press Inc., White Plains, New York).

Engineered during the last half of the 1940's, by 1954 the new Quiet-War machine was ready. With the creation of the maser in 1954, the promise of unlocking unlimited sources of fusion atomic energy from the heavy hydrogen in sea water and the consequent availability of unlimited social power was a possibility only decades away. The combination was irresistible. The Quiet War was quietly declared by the International Elite at a meeting held in 1954. Although the silent weapons system was nearly exposed 13 years later, the evolution of the new weapon-system has never suffered any major setbacks. This year of 1979 marks the 25th anniversary of the beginning of the Quiet War. Already this domestic war has had many victories on many fronts throughout the world.

Political Introduction

In 1954 it was well recognised by those in positions of authority, that it would be only a few decades, before the general public would be able to grasp and upset the cradle of power, for the elements of the new silent-weapon technology were as accessible for use in providing a public utopia as they were for providing a private utopia. So, the issue of primary concern, namely that of dominance, revolved around the subject of the energy sciences.

Energy

Energy is recognised as the key to all activity on earth. Natural science is the study of the sources and control of natural energy, and social science (theoretically expressed as economics) is the study of the sources and control of social energy. Both are bookkeeping systems based on mathematics. Therefore, mathematics is the primary energy science and the bookkeeper can be king if the public can be kept ignorant of the methodology of the bookkeeping.

All science is merely a means to an end. The means is knowledge. The end is control. Beyond this remains only one issue: Who will be the beneficiary? In 1954 this was the issue of primary concern. Although the so-called "moral issues" were raised, in view of the law of natural selection it was agreed that a nation or world of people who will not use their intelligence are no better than animals who do not have intelligence. Such people are beasts of burden and steaks on the table by choice and consent.

Consequently, in the interest of future world order, peace, and tranquillity, it was decided to wage a private quiet war against the American public with an ultimate objective of permanently shifting the natural and social energy (wealth) of the undisciplined and irresponsible many into the hands of the self-disciplined, responsible, and "worthy" few.

In order to implement this objective, it was necessary to create, secure, and apply new weapons which, as it turned out, were a class of weapons so subtle and sophisticated in their principle of operation and public appearance as to earn for themselves the name of "silent weapons." In conclusion, the objective of economic research, as conducted by the magnates of capital (banking) and the industries of commodities (goods and services), is the establishment of an economy which is totally predictable and which can be manipulated.

In order to achieve this totally predictable economy, the low-class elements of society must be brought under total control, i.e., They must be housebroken, trained, and assigned a yoke and long-term social duties from a very early age, before they have an opportunity to question the propriety of the matter. In order to achieve such conformity, the lower-class family unit must be disintegrated by a process of increasing preoccupation of the parents and the establishment of government-operated day-care centres for the occupationally orphaned children.

The quality of education given to the lower class must be of the poorest sort, so that the moat of ignorance isolating the inferior class from the superior class is and always remains, incomprehensible to the inferior class. With such an initial handicap, even bright lower class individuals have little if any hope of extricating themselves from their assigned lot in life. This form of slavery is essential to maintain some measure of social order, peace, and tranquillity for the ruling upper class.

Descriptive Introduction to the Silent Weapon

Everything which can be expected from an ordinary weapon is also expected from a silent weapon by its creators, but only in its own manner of functioning. It shoots situations, instead of bullets; its propellant is data processing, instead of the conventional chemical explosion. The power originates from bits of data in a computer, instead of grains of gunpowder inside a gun. The operator is a computer programmer, instead of a military marksman, and the orders are issued by a banking magnate, instead of a military general. It makes no obvious explosive noises, causes no obvious physical or mental injuries, and does not interfere in an obvious way with anyone's daily social life.

However, it makes an unmistakable "noise," causes unmistakable physical and mental damage, and interferes unmistakably with daily social life, that is, in ways which are unmistakable to a trained observer who knows what to look for. The public cannot comprehend this weapon, and therefore cannot believe that they are being attacked and subdued by a weapon. The public might instinctively feel that something is wrong, but because of the technical nature of the silent weapon, they cannot express their feeling in any rational way, or handle the problem with intelligence. Therefore, they do not know how to call for help, nor do they know how to associate with others to defend themselves against it.

When a silent weapon is applied gradually, the public adjusts and adapts to its presence and learns to tolerate its encroachment on their lives until the psychological pressure (applied via economic methods) becomes too great and they crack up. Therefore, in a way, the silent weapon can be considered to be a type of biological weapon. It attacks the vitality, options, and mobility of the individuals of a society by knowing, understanding, manipulating, and attacking their sources of natural and social energy, and their physical, mental, and emotional strengths and weaknesses.

Theoretical Introduction

"Give me control over a nation's currency, and I care not who makes its laws." - Mayer Amschel Rothschild (1743 - 1812). Today's silent weapons technology is an outgrowth of a simple idea discovered, succinctly expressed, and effectively applied by Mr. Mayer Amschel Rothschild. Mr. Rothschild discovered the missing passive component of economic theory known as economic inductance. He, of course, did not think of his discovery in these twentieth century terms, and, to be sure, mathematical analysis had to wait for the Second Industrial Revolution, the rise of the theory of mechanics and electronics, and finally, the invention of the electronic computer before it could be effectively applied in the control of the world economy.

General Energy Concepts

In the study of energy systems, there always appears three elementary concepts. These are:

Potential Energy,
Kinetic Energy, and
Energy Dissipation.

Corresponding to these concepts, there are three idealised, essentially pure physical counterparts called passive components.

In the science of physical mechanics, the phenomenon of Potential Energy is associated with a physical property called Elasticity or stiffness, and can be represented by a stretched spring. In electronic science, Potential energy is stored in a capacitor instead of a spring. This property is called Capacitance instead of Elasticity.

In the science of physical mechanics, the phenomenon of Kinetic Energy is associated with a physical property called Inertia or Mass, and can be represented by a mass or a flywheel in motion. In electronic science, Kinetic Energy is stored in an inductor (in a magnetic field) instead of a mass. This property is called Inductance instead of Inertia.

In the science of physical mechanics, the phenomenon of Energy Dissipation is associated with a physical

property called Friction or Resistance, and can be represented by a dashpot or other device which converts energy into heat. In electronic science, Energy Dissipation is performed by an element called either a Resistor.

In economics the equivalents of these three energy concepts are:

Economic Capacitance - **Capital** (money, stock/inventory, investments in buildings and durables, etc.)

Economic Conductance - **Goods** (production flow coefficients)

Economic Inductance - **Services** (the influence of the industrial population on output)

All of the mathematical theory developed in the study of one energy system (e.g., mechanics, electronics, etc.) can be immediately applied in the study of any other energy system (e.g., economics).

Mr Rothschild's Energy Discovery

What Mr. Rothschild discovered was the basic principle of power, influence, and control over people as applied to economics. That principle is "when you assume the appearance of power, people soon give it to you." Mr. Rothschild had discovered that currency or deposit loan accounts had the required appearance of power that could be used to induce people (inductance, with people corresponding to a magnetic field) into surrendering their real wealth in exchange for a promise of greater wealth (instead of real compensation). They would put up real collateral in exchange for a loan of promissory notes. Mr. Rothschild found that he could issue more notes than he had backing for, provided he had someone's stock of gold to show his customers as a persuader.

Mr. Rothschild loaned his promissory notes to individual and to governments. These would create overconfidence. Then he would make money scarce, tighten control of the system, and collect the collateral through the obligation of contracts. The cycle was then repeated. These pressures could be used to ignite a war. Then he would control the availability of currency to determine who would win the war. Any government which agreed to give him control of its economic system got his support. Collection of debts was guaranteed by economic aid to the enemy of the debtor. The profit derived from this economic methodology made Mr. Rothschild all the more able to expand his wealth. He found that the public greed would allow currency to be printed by government order beyond the limits (inflation) of backing in precious metal or the production of goods and services.

Apparent Capital as "Paper" Inductor

In this structure, credit, presented as a pure element called "currency," has the appearance of capital, but is in effect, negative capital. Hence, it has the appearance of service, but it is, in fact, indebtedness or debt. It is therefore an economic inductance instead of an economic capacitance, and if balanced in no other way, will be balanced by the negation of population (war, genocide). The total sum of goods and services represents real capital and it is called the **Gross National Product**, and currency may be printed up to this level and still represent economic capacitance; but currency printed beyond this level is subtractive, represents the introduction of economic inductance, and so becomes notes of indebtedness.

War is therefore the balancing of the system by killing the true creditors (the public which has been taught to exchange true value for inflated currency) and falling back on whatever is left of the resources of nature and regeneration of those resources. Mr. Rothschild had discovered that currency gave him the power to rearrange the economic structure to his own advantage, to shift economic inductance to those economic positions which would encourage the greatest economic instability and oscillation.

The final key to economic control had to wait until there was sufficient data and high-speed computing equipment to keep close watch on the economic oscillations created by price shocking and excess paper energy credits - paper inductance/inflation.

Breakthrough

The aviation field provided the greatest evolution in economic engineering by way of the mathematical theory of shock testing. In this process, a projectile is fired from an airframe on the ground and the impulse of the recoil is monitored by vibration transducers connected to the airframe and wired to chart recorders. By studying the echoes or reflections of the recoil impulse in the airframe, it is possible to discover critical vibrations in the structure of the airframe which either vibrations of the engine or aeolian vibrations of the wings, or a combination of the two, might reinforce resulting in a resonant self-destruction of the airframe in flight. From the standpoint of engineering, this means that the strengths and weaknesses of the structure of the airframe in terms of vibrational energy can be discovered and manipulated.

Application in Economics

To use this method of airframe shock testing in economic engineering, the prices of commodities are shocked, and the public consumer reaction is monitored. The resulting echoes of the economic shock are interpreted theoretically by computers and the psycho-economic structure of the economy is thus discovered. It is by this process that partial differential and difference matrices are discovered that define the family household and make

possible its evaluation as an economic industry (dissipative consumer structure). Then the response of the household to future shocks can be predicted and manipulated, and society becomes a well-regulated animal with its reins under the control of a sophisticated computer-regulated social energy bookkeeping system. Eventually every individual element of the structure comes under computer control through a knowledge of personal preferences, such knowledge guaranteed by computer association of consumer preferences (universal product code - the striped bar codes on packages) with identified consumers (initially identified through the use of a credit card and later through a permanent "tattooed" body number invisible under normal ambient illumination).

The Economic Model

The Harvard Economic Research Project (1948-1952) was an extension of World War II Operations Research. Its purpose was to discover the science of controlling an economy: at first the American economy, and then the world economy. It was felt that with sufficient mathematical foundation and data, it would be nearly as easy to predict and control the trend of an economy as to predict and control the trajectory of a projectile. Such has proven to be the case. Moreover, the economy has been transformed into an accurately targeted guided missile.

The immediate aim of the Harvard project was to discover the economic structure, what forces can change that structure, how the behaviour of the structure can be predicted, and how it can be manipulated. What was needed was a well-organised knowledge of the mathematical structures and interrelationships of investment, production, distribution, and consumption. Briefly, it was discovered that an economy obeyed the same laws as electricity and that all of the mathematical theory and practical and computer know-how developed for the electronic field could be directly applied in the study of economics. This discovery was not openly declared, and its more subtle implications were, and are, kept as a closely guarded secret, for example, in an economic model, human life is measured in dollars, and that the electric spark generated when opening a switch connected to an active inductor is mathematically the same as starting a war.

The greatest hurdle which theoretical economists faced was the accurate description of the household as an industry. This is a challenge because consumer purchases are a matter of choice which in turn is influenced by family income, purchase price, and other economic factors. This hurdle was cleared in an indirect and statistically approximate way by an application of shock testing to determine the current characteristics, called current technical coefficients, of a household industry. Finally, because problems in theoretical electronics can be translated very easily into problems of theoretical economics, and the solution translated back again, it follows that only a book of language translation and concept definition needed to be written for economics. The remainder could be got from standard works on mathematics and electronics. This makes the publication of books on advanced economics unnecessary, and greatly simplifies the silent war project security.

Industrial Diagrams

An ideal industry is defined as a device which receives value from other industries in several forms and converts them into one specific product for sales and distribution to other industries. It has several inputs and one output. What the public normally thinks of as one industry is really an industrial complex, where several industries under one roof produce one or more products.

Three Industrial Classes

Industries fall into three categories or classes by type of output:

Class 1 - **Capital** (resources)

Class 2 - **Goods** (commodities or use - dissipative)

Class 3 - **Services** (action of population).

Class 1 industries exist at three levels:

(a) **Nature** - sources of energy and raw materials.

(b) **Government** - printing of currency equal to the gross national product (GNP), and extension of currency in excess of GNP.

(c) **Banking** - loaning of money for interest, and extension (inflation/counterfeiting) of economic value through deposit loan accounts.

Class 2 industries exist as producers of tangible or consumer (dissipated) products. This sort of activity is usually recognised and labelled by the public as "industry."

Class 3 industries are those which have service rather than a tangible product as their output. These industries are called

(a) **Households**, and

(b) **Governments**. Their output is human activity of a mechanical sort, and their basis is population.

Aggregation

The whole economic system can be represented by a three-industry model if one allows the names of the outputs to be:

- (1) Capital,
- (2) Goods, and
- (3) Services.

The problem with this representation is that it would not show the influence of, say, the textile industry on the steel industry. This is because both the textile industry and the steel industry would be contained within a single classification called the "goods industry" and by this process of combining or aggregating these two industries under one system block they would lose their economic individuality.

The E- Model

A national economy consists of simultaneous flows of production, distribution, consumption, and investment. If all of these elements including labour and human functions are assigned a numerical value using common units of measure, say, US dollars at their 1939 value, then this flow can be further represented by a current flow in an electronic circuit, and its behaviour can be predicted and manipulated with useful precision.

The three ideal passive energy components of electronics, the capacitor, the resistor, and the inductor correspond to the three ideal passive energy components of economics called the pure industries of capital, goods, and services.

Economic Capacitance represents the storage of capital in one form or another.

Economic Conductance represents the level of conductance of materials for the production of goods.

Economic Inductance represents the inertia of economic value in motion. This is a population phenomenon known as services.

Economic Inductance

An electrical inductor (e.g., a coil or wire) has an electric current as its primary phenomenon and a magnetic field as its secondary phenomenon (inertia). Corresponding to this, an economic inductor has a flow of economic value as its primary phenomenon and a population field as its secondary field phenomenon of inertia. When the flow of economic value (e.g., money) diminishes, the human population field collapses in order to keep the economic value (money) flowing (extreme case - war). This public inertia is a result of consumer buying habits, expected standard of living, etc., and is generally a phenomenon of self-preservation.

Inductive Factors to Consider

- (1) Population
- (2) Magnitude of the economic activities of the government
- (3) The method of financing these government activities
(See Peter-Paul Principle - inflation of the currency.)

Translation

(a few examples will be given.)

Charge - coulombs - dollars (1939).

Current Flow - amperes (coulombs per second) - dollars of flow per year.

Motivating Force - volts - dollars (output) demand.

Conductance - amperes per volt - dollars of flow per year per dollar demand.

Capacitance - coulombs per volt - dollars of production inventory/stock per dollar demand.

Time-Flow Relationships and Self-Destructive Oscillations

An ideal industry may be symbolised electronically in various ways. The simplest way is to represent a demand by a voltage and a supply by a current. When this is done, the relationship between the two becomes what is called an admittance, which can result from three economic factors:

- (1) **Hindsight flow**,
- (2) **Present flow**, and
- (3) **Foresight flow**.

Foresight flow is the result of that property of living entities to cause energy (food) to be stored for a period of low energy (e.g., a winter season). It consists of demands made upon an economic system for that period of low energy (winter season). In a production industry it takes several forms, one of which is known as production stock or inventory. In electronic symbology this specific industry demand (a pure capital industry) is represented by capacitance and the stock or resource is represented by a stored charge. Satisfaction of an industry demand

suffers a lag because of the loading effect of inventory priorities.

Present flow ideally involves no delays. It is, so to speak, input today for output today, a "hand to mouth" flow. In electronic symbology, this specific industry demand is represented by a conductance which is then a simple economic valve (a dissipative element).

Hindsight flow is known as habit or inertia. In electronics this phenomenon is the characteristic of an inductor (economic analogue = a pure service industry) in which a current flow (economic analogue = flow of money) creates a magnetic field (economic analogue = active human population) which, if the current (money flow) begins to diminish, will collapse (war) to maintain the current (flow of money - energy).

Other large alternatives to war as economic inductors or economic flywheels are an open-ended social welfare program, or an enormous (but fruitful) open-ended space program. The problem with stabilising the economic system is that there is too much demand on account of:

- (1) Too much greed and
- (2) Too much population.

This creates excessive economic inductance which can only be balanced with economic capacitance (true resources or value - e.g., in goods or services).

The social welfare program is nothing more than an open-ended credit balance system which creates a false capital industry to give non-productive people a roof over their heads and food in their stomachs. This can be useful, however, because the recipients become state property in return for the "gift," and form a standing army for the Elite - as he who pays the piper picks the tune. Those who get hooked on the economic drug, must go to the Elite for a fix. In this, the method of introducing large amounts of stabilising capacitance is by borrowing on the future "credit" of the world. This is a fourth law of motion - **onset**, and consists of performing an action and leaving the system before the reflected reaction returns to the point of action - a delayed reaction.

The means of surviving the reaction is by changing the system before the reaction can return. By this means, politicians become more popular in their own time and the public pays later. In fact, the measure of such a politician is the delay time. The same thing is achieved by a government by printing money beyond the limit of the gross national product, and economic process called inflation. This puts a large quantity of money into the hands of the public and maintains a balance against their greed, creates a false self-confidence in them and, for a while, stays the wolf from the door.

They must eventually resort to war to balance the account, because war ultimately is merely the act of destroying the creditor, and the politicians are the publicly hired hit men that justify the act to keep the responsibility and blood off the public conscience. If the people really cared about their fellow man, they would control their appetites (greed, procreation, etc.) so that they would not have to operate on a credit or welfare social system which steals from the worker to satisfy the bum. Since most of the general public will not exercise restraint, there are only two alternatives to reduce the economic inductance of the system.

- (1) Let the populace bludgeon each other to death in war, which will only result in a total destruction of the living earth.
- (2) Take control of the world by the use of economic "silent weapons" in a form of "quiet warfare" and reduce the economic inductance of the world to a safe level by a process of benevolent slavery and genocide.

The latter option has been taken as the obviously better option. At this point it should be crystal clear to the reader why absolute secrecy about the silent weapons is necessary. The general public refuses to improve its own mentality and its faith in its fellow man. It has become a herd of proliferating barbarians, and, so to speak, a blight upon the face of the earth. They do not care enough about economic science to learn why they have not been able to avoid war despite religious morality, and their religious or self-gratifying refusal to deal with earthly problems, places the solution of the earthly problem beyond their reach.

It is left to those few who are truly willing to think and survive, as the fittest to survive, to solve the problem for themselves as the few who really care. Otherwise, exposure of the silent weapon would destroy our only hope of preserving the seed of the future true humanity.

The Household Industry

The industries of finance (banking), manufacturing, and government, real counterparts of the pure industries of capital, goods, and services, are easily defined because they are generally logically structured. Because of this their processes can be described mathematically and their technical coefficients can be easily deduced. This, however, is not the case with the service industry known as the household industry.

Household Models

The problem which a theoretical economist faces is that the consumer preferences of any household are not easily predictable and the technical coefficients of any one household tend to be a non-linear, very complex, and variable function of income, prices, etc. Computer information derived from the use of the universal product code in conjunction with credit-card purchase as an individual household identifier, could change this state of affairs, but the Universal Product Code method is not yet available on a national or even a significant regional scale. To compensate for this data deficiency, an alternate indirect approach of analysis has been adopted known as economic shock testing. This method, widely used in the aircraft manufacturing industry, develops an aggregate statistical sort of data.

Applied to economics, this means that all of the households in one region or in the whole nation are studied as a group or class rather than individually, and the mass behaviour rather than the individual behaviour is used to discover useful estimates of the technical coefficients governing the economic structure of the hypothetical single-household industry. One method of evaluating the technical coefficients of the household industry depends upon shocking the prices of a commodity and noting the changes in the sales of all of the commodities.

Economic Shock Testing

In recent times, the application of Operations Research to the study of the public economy has been obvious for anyone who understands the principles of shock testing. In the shock testing of an aircraft airframe, the recoil impulse of firing a gun mounted on that airframe causes shock waves in that structure which tell aviation engineers the conditions under which some parts of the airplane or the whole airplane or its wings will start to vibrate or flutter like a guitar string, a flute reed, or a tuning fork, and disintegrate or fall apart in flight. Economic engineers achieve the same result in studying the behaviour of the economy and the consumer public by carefully selecting a staple commodity such as beef, coffee, gasoline, or sugar, and then causing a sudden change or shock in its price or availability, thus kicking everybody's budget and buying habits out of shape. They then observe the shock waves which result by monitoring the changes in advertising, prices, and sales of that and other commodities.

The objective of such studies is to acquire the know-how to set the public economy into a predictable state of motion or change, even a controlled self-destructive state of motion which will convince the public that certain "expert" people should take control of the money system and re-establish security (rather than liberty and justice) for all. When the subject citizens are rendered unable to control their financial affairs, they, of course, become totally enslaved, and a source of cheap labour. Not only the prices of commodities, but also the availability of labour can be used as the means of shock testing. Labour strikes deliver excellent tests shocks to an economy, especially in the critical service areas of trucking (transportation), communication, public utilities (energy, water, garbage collection), etc. By shock testing, it is found that there is a direct relationship between the availability of money flowing in an economy and the real psychological outlook and response of masses of people dependent upon that availability. For example, there is a measurable quantitative relationship between the price of gasoline and the probability that a person would experience a headache, feel a need to watch a violent movie, smoke a cigarette, or go to a tavern for a mug of beer.

It is most interesting that, by observing and measuring the economic models by which the public tries to run from their problems and escape from reality, and by applying the mathematical theory of Operations Research, it is possible to program computers to predict the most probable combination of created events (shocks) which will bring about a complete control and subjugation of the public through a subversion of the public economy (by shaking the plum tree).

Introduction to Economic Amplifiers

Economic Amplifiers are the active components of economic engineering. The basic characteristic of any amplifier (mechanical, electrical, or economic) is that it receives an input control signal and delivers energy from an independent energy source to a specified output terminal in a predictable relationship to that input control signal. The simplest form of an economic amplifier is a device called advertising. If a person is spoken to by a T.V. advertiser as if he were a twelve-year-old, then, due to suggestibility, he will, with a certain probability, respond or react to that suggestion with the uncritical response of a twelve-year-old and will reach into his economic reservoir and deliver its energy to buy that product on impulse when he passes it in the store.

An Economic Amplifier may have several inputs and output. Its response might be instantaneous or delayed. Its circuit symbol might be a rotary switch if its options are exclusive, qualitative, "go" or "no-go", or it might have its parametric input/output relationships specified by a matrix with internal energy sources represented. Whatever its form might be, its purpose is to govern the flow of energy from a source to an output sink in direct relationship to an input control signal. For this reason, it is called an active circuit element or component. Economic Amplifiers fall into classes called strategies, and, in comparison with electronic amplifiers, the specific internal functions of an economic amplifier are called logistical instead of electrical. Therefore, economic amplifiers not only deliver power gain but also, in effect, are used to cause changes in the economic circuitry.

In the design of an economic amplifier we must have some idea of at least five functions ,which are:

- (1) The available input signals,
- (2) The desired output-control objectives,
- (3) The strategic objective,
- (4) The available economic power sources,
- (5) The logistical options.

The process of defining and evaluating these factors and incorporating the economic amplifier into an economic system has been popularly called "game theory". The design of an economic amplifier begins with a specification of the power level of the output, which can range from personal to national. The second condition is accuracy of response, i.e., how accurately the output action is a function of the input commands. High gain combined with strong feedback helps to deliver the required precision. Most of the error will be in the input data signal. Personal input data tends to be specified, while national input data tends to be statistical.

Short List of Inputs

General sources of information:

- (1) Telephone taps
- (2) Surveillance
- (3) Analysis of garbage
- (4) Behaviour of children in school

Standard of living by:

- (1) Food
- (2) Clothing
- (3) Shelter
- (4) Transportation

Social contacts:

- (1) Telephone - itemized record of calls
- (2) Family - marriage certificates, birth certificates, etc.
- (3) Friends, associates, etc.
- (4) Memberships in organizations
- (5) Political affiliation

The Personal Paper Trail

Personal buying habits, i.e., personal consumer preferences:

- (1) Bank accounts
- (2) Credit-card purchases
- (3) "Tagged" credit-card purchases - those with a Universal Product Code

Assets:

- (1) Bank accounts
- (2) Savings accounts
- (3) Property
- (4) Business
- (5) Vehicles, etc.
- (6) Safety deposit at a bank
- (7) Stock market purchases

Liabilities:

- (1) Creditors
- (2) Enemies (see - legal)
- (3) Loans
- (4) Consumer credit

Government sources (ploys)*:

- (1) Welfare
- (2) Social Security
- (3) U.S.D.A. surplus food
- (4) Dole
- (5) Grants
- (6) Subsidies

*Principle of this ploy - the citizen will almost always make the collection of information easy if he can operate on the "free sandwich principle" of "eat now, and pay later."

Government sources (via intimidation) :

- (1) Internal Revenue Service
- (2) OSHA
- (3) Census
- (4) etc.

Other government sources - surveillance of U.S. mail.

Habit Patterns - Programming

Strengths and weaknesses:

- (1) Activities (sports, hobbies, etc.)
- (2) See "legal" (fear, anger, etc. - crime record)
- (3) Hospital records (drug sensitivities, reaction to pain, etc.)
- (4) Psychiatric records (fears, angers, disgusts, adaptability, reactions to stimuli, violence, suggestibility or hypnosis, pain, pleasure, love, and sex)

Methods of coping - of adaptability - behaviour:

- (1) Consumption of alcohol
- (2) Consumption of drugs
- (3) Entertainment
- (4) Religious factors influencing behaviour
- (5) Other methods of escaping from reality

Payment modus operandi (MO) - pay on time, etc.:

- (1) Payment of telephone bills
- (2) Energy purchases (electrical, gas,...)
- (3) Water purchases
- (4) Repayment of loans
- (5) House payments
- (6) Vehicle payments
- (7) Payments on credit cards

Political sensitivity:

- (1) Beliefs
- (2) Contacts
- (3) Position
- (4) Strengths/weaknesses
- (5) Projects/activities

Legal inputs - behavioural control (Excuses for investigation, search, arrest, or use of force to modify behaviour):

- (1) Court records
- (2) Police records - NCIC
- (3) Driving record
- (4) Reports made to police
- (5) Insurance information
- (6) Anti-establishment acquaintances

National Input Information

Business sources (via I.R.S., etc.):

- (1) Prices of commodities
- (2) Sales
- (3) Investments in
 - (a) stocks/inventory
 - (b) production tools and machinery
 - (c) buildings and improvements
 - (d) the stock market

Banks and credit bureaus:

- (1) Credit information
- (2) Payment information

Miscellaneous sources:

- (1) Polls and surveys
- (2) Publications
- (3) Telephone records
- (4) Energy and utility purchases

Short List of Inputs

Outputs - create controlled situations - manipulation of the economy, hence society - control of compensation and income.

Sequence:

- (1) Allocates opportunities.
- (2) Destroys opportunities.
- (3) Controls the economic environment.
- (4) Controls the availability of raw materials.
- (5) Controls capital.
- (6) Controls bank rates.
- (7) Controls the inflation of the currency.
- (8) Controls the possession of property.
- (9) Controls industrial capacity.
- (10) Controls manufacturing.
- (11) Controls the availability of goods (commodities) .
- (12) Controls the prices of commodities.
- (13) Controls services, the labour force, etc.
- (14) Controls payments to government officials
- (15) Controls the legal functions.
- (16) Controls the personal data files - uncorrectable by the party slandered.
- (17) Controls advertising.
- (18) Controls media contact.
- (19) Controls material available for T.V. viewing.
- (20) Disengages attention from real issues.
- (21) Engages emotions.
- (22) Creates disorder, chaos, and insanity.
- (23) Controls design of more probing tax forms.
- (24) Controls surveillance.
- (25) Controls the storage of information.
- (26) Develops psychological analyses and profiles of individuals.
- (27) Controls sociological factors.
- (28) Controls health options.
- (29) Preys on weakness.
- (30) cripples strengths.

(31) leaches wealth and substance.

Table of Strategies

Do This	To Get This
Keep the public ignorant	Less public organisation
Maintain access control	Required reaction to output (prices, sales)
Create preoccupation	Lower defences
Attack the family unit	Control the education of the young
Give less cash and more credit and dole	More self-indulgence and more data
Attack the privacy of the church	Destroy faith in this sort of government
Social conformity	Computer programming simplicity
Minimise tax protests	Maximum economic data, minimum enforcement problems
Stabilise the consent	Simplicity coefficients
Tighten control of variables	Simpler computer input data - greater predictability
Establish boundary conditions	Problem simplicity / solutions of differential and difference equations
Proper timing	Less data shift and blurring
Maximise control	Minimum resistance to control
Collapse of currency	Destroy the faith of the American people in each other

Diversion, the Primary Strategy

Experience has shown that the simplest method of securing a silent weapon and gaining control of the public is to keep the public undisciplined and ignorant of the basic system principles on the one hand, while keeping them confused, disorganised, and distracted with matters of no real importance on the other hand. This is achieved by:

- (1) Disengaging their minds; sabotaging their mental activities; providing a low-quality program of public education in mathematics, logic, systems design and economics; and discouraging technical creativity.
- (2) Engaging their emotions, increasing their self-indulgence and their indulgence in emotional and physical activities, by:
 - (a) Unrelenting emotional affronts and attacks (mental and emotional rape) by way of constant barrage of sex, violence, and wars in the media - especially the T.V. and the newspapers.
 - (b) Giving them what they desire - in excess - "junk food for thought" - and depriving them of what they really need.
- (3) Rewriting history and law and subjecting the public to the deviant creation, thus being able to shift their thinking from personal needs to highly fabricated outside priorities.

These preclude their interest in, and discovery of, the silent weapons of social automation technology. The general rule is that there is a profit in confusion; the more confusion, the more profit. Therefore, the best approach is to create problems and then offer solutions.

Diversion Summary

Media: Keep the adult public attention away from the real social issues, and captivated by matters of no real importance.

Schools: Keep the young public ignorant of real mathematics, real economics, real law, and real history.

Entertainment: Keep the public entertainment below a sixth-grade (12 year old) level.

Work: Keep the public busy, busy, busy, with no time to think; back on the farm with the other animals.

Consent, the Primary Victory

A silent weapon system operates upon data obtained from a docile public by legal (but not always lawful) force. Much information is made available to silent weapon systems programmers through the Internal Revenue Service. (See Studies in the Structure of the American Economy for an I.R.S. source list). This information consists of the enforced delivery of well-organised data contained in federal and state tax forms, collected, assembled, and submitted by slave labour provided by taxpayers and employers. Furthermore, the number of such forms submitted to the I.R.S. is a useful indicator of public consent, an important factor in strategic decision making. Other data sources are given in the Short List of Inputs.

Consent Coefficients - numerical feedback indicating victory status. Psychological basis: When the government is

able to collect tax and seize private property without just compensation, it is an indication that the public is ripe for surrender and is consenting to enslavement and legal encroachment. A good and easily quantified indicator of harvest time is the number of public citizens who pay income tax despite an obvious lack of reciprocal or honest service from the government.

Amplification Energy Sources

The next step in the process of designing an Economic Amplifier is discovering the energy sources. The energy sources which support any primitive economic system are, of course, a supply of raw materials, and the consent of the people to labour and consequently assume a certain rank, position, level, or class in the social structure, i.e., to provide labour at various levels in the pecking order. Each class, in guaranteeing its own level of income, controls the class immediately below it, hence preserves the class structure. This provides stability and security, but also government from the top. As time goes on and communication and education improve, the lower-class elements of the social labour structure become knowledgeable and envious of the good things that the upper-class members have. They also begin to attain a knowledge of energy systems and the ability to enforce their rise through the class structure. This threatens the sovereignty of the Elite.

If this rise of the lower classes can be postponed long enough, the Elite can achieve energy dominance, and labour by consent no longer will hold a position of an essential energy source. Until such energy dominance is absolutely established, the consent of people to labour and let others handle their affairs must be taken into consideration, since failure to do so could cause the people to interfere in the final transfer of energy sources to the control of the Elite. It is essential to recognise that at this time, public consent is still an essential key to the release of energy in the process of economic amplification. Therefore, consent as an energy release mechanism will now be considered.

Logistics

The successful application of a strategy requires a careful study of inputs, outputs, the strategy connecting the inputs and the outputs, and the available energy sources to fuel the strategy. This study is called "Logistics". A logistical problem is studied at the elementary level first, and then levels of greater complexity are studied as a synthesis of elementary factors. This means that a given system is analysed, i.e., broken down into its sub-systems, and these in turn are analysed, until by this process, one arrives at the logistical "atom," the individual.

The Artificial Womb

From the time a person leaves his mother's womb, his every effort is directed towards building, maintaining, and withdrawing into artificial wombs, various sorts of substitute protective devices or shells. The objective of these artificial wombs is to provide a stable environment for both stable and unstable activity; to provide a shelter for the evolutionary processes of growth and maturity - i.e., survival; to provide security for freedom and to provide defensive protection for offensive activity. This is equally true of both the general public and the Elite. However, there is a definite difference in the way each of these classes go about the solution of problems.

The Political Structure of a Nation - Dependency

The primary reason why the individual citizens of a country create a political structure is a subconscious wish or desire to perpetuate their own dependency relationship of childhood. Simply put, they want a human god to eliminate all risk from their life, pat them on the head, kiss their bruises, put a chicken on every dinner table, clothe their bodies, tuck them into bed at night, and tell them that everything will be all right when they wake up in the morning. This public demand is incredible, so the human god, the politician, meets incredibility with incredibility by promising the world and delivering nothing. So who is the bigger liar? The public? or The "godfather"? This public behaviour is surrender born of fear, laziness, and expediency. It is the basis of the welfare state as a strategic weapon, useful against a disgusting public.

Action / Offence

Most people want to be able to subdue and/or kill other human beings who disturb their daily lives, but they do not want to have to cope with the moral and religious issues which such an overt act on their part might raise. Therefore, they assign the dirty work to others (including their own children) so as to keep the blood off their hands. They rave about the humane treatment of animals and then sit down to a delicious hamburger from a whitewashed slaughterhouse down the street and out of sight. But even more hypocritical, they pay taxes to finance a professional association of hit men collectively called politicians, and then complain about corruption in government.

Responsibility

Again, most people want to be free to do the things (to explore, etc.) but they are afraid of failing. The fear of failure is manifested in irresponsibility, and especially in delegating those personal responsibilities to others where success is uncertain or carries possible or created liabilities (law) which the person is not prepared to accept. They want authority (root word - "author"), but they will not accept responsibility or liability. So they hire politicians

to face reality for them.

Summary

The people hire the politicians so that the people can:

- (1) Obtain security without managing it.
- (2) Obtain action without thinking about it.
- (3) Inflict theft, injury, and death upon others without having to contemplate either life or death.
- (4) Avoid responsibility for their own intentions.
- (5) Obtain the benefits of reality and science without exerting themselves or learning either of these things.

They give the politicians the power to create and manage a war machine:

- (1) Provide for the survival of the nation/womb.
- (2) Prevent encroachment of anything upon the nation/womb.
- (3) Destroy the enemy who threatens the nation/womb.
- (4) For the sake of stability of the nation/womb, destroy those citizens of their own country who do not conform.

Politicians hold many quasi-military jobs, the lowest being the police who are soldiers, the attorneys and C.P.A.s next who are spies and saboteurs (licensed), and the judges who shout orders and run the closed union military shop for whatever the market will bear. The generals are industrialists. The "presidential" level of commander-in-chief is shared by the international bankers. The people know that they have created this farce and financed it with their own taxes (consent), but they would rather knuckle under than be the hypocrite. Thus, a nation becomes divided into two very distinct parts, a docile sub-nation [great silent majority] and a political sub-nation. The political sub-nation remains attached to the docile sub-nation, tolerates it, and leaches its substance until it grows strong enough to detach itself and then devour its parent.

System Analysis

In order to make meaningful computerized economic decisions about war, the primary economic flywheel, it is necessary to assign concrete logistical values to each element of the war structure - personnel and material alike. This process begins with a clear and candid description of the subsystems of such a structure.

The Draft (military service)

Few efforts of human behaviour modification are more remarkable or more effective than that of the socio-military institution known as the draft. A primary purpose of a draft or other such institution is to instill, by intimidation, in the young males of a society the uncritical conviction that the government is omnipotent. He is soon taught that a prayer is slow to reverse what a bullet can do in an instant. Thus, a man trained in a religious environment for eighteen years of his life can, by this instrument of the government, be broken down, be purged of his fantasies and delusions in a matter of mere months. Once that conviction is instilled, all else becomes easy to instill.

Even more interesting is the process by which a young man's parents, who purportedly love him, can be induced to send him off to war to his death. Although the scope of this work will not allow this matter to be expanded in full detail, nevertheless, a coarse overview will be possible and can serve to reveal those factors which must be included in some numerical form in a computer analysis of social and war systems. We begin with a tentative definition of the draft. The draft (selective service, etc.) is an institution of compulsory collective sacrifice and slavery, devised by the middle-aged and elderly for the purpose of pressing the young into doing the public dirty work. It further serves to make the youth as guilty as the elders, thus making criticism of the elders by the youth less likely (Generational Stabilizer). It is marketed and sold to the public under the label of "patriotic = national" service.

Once a candid economic definition of the draft is achieved, that definition is used to outline the boundaries of a structure called a Human Value System, which in turn is translated into the terms of game theory. The value of such a slave labourer is given in a Table of Human Values, a table broken down into categories by intellect, experience, post-service job demand, etc. Some of these categories are ordinary and can be tentatively evaluated in terms of the value of certain jobs for which a known fee exists. Some jobs are harder to value because they are unique to the demands of social subversion, for an extreme example: the value of a mother's instruction to her daughter, causing that daughter to put certain behavioural demands upon a future husband ten or fifteen years hence; thus, by suppressing his resistance to a perversion of a government, making it easier for a banking cartel to buy the State of New York in, say, twenty years.

Such a problem leans heavily upon the observations and data of wartime espionage and many types of psychological testing. But crude mathematical models (algorithms, etc.) can be devised, if not to predict, at least to predetermine these events with maximum certainty. What does not exist by natural cooperation is thus enhanced by calculated compulsion. Human beings are machines, levers which may be grasped and turned, and there is little real difference between automating a society and automating a shoe factory. These derived values are variable. (It is necessary to use a current Table of Human Values for computer analysis). These values are given in true measure rather than U.S. dollars, since the latter is unstable, being presently inflated beyond the

production of national goods and services so as to give the economy a false kinetic energy ("paper" inductance). The silver value is stable, it being possible to buy the same amount with a gram of silver today as it could be bought in 1920. Human value measured in silver units changes slightly due to changes in production technology.

Factor 1 - Enforcement

As in every social system approach, stability is achieved only by understanding and accounting for human nature (action/reaction patterns). A failure to do so can be, and usually is, disastrous. As in other human social schemes, one form or another of intimidation (or incentive) is essential to the success of the draft. Physical principles of action and reaction must be applied to both internal and external subsystems. To secure the draft, individual brainwashing/programming and both the family unit and the peer group must be engaged and brought under control.

Factor 2 - Father

The man of the household must be housebroken to ensure that junior will grow up with the right social training and attitudes. The advertising media, etc., are engaged to see to it that father-to-be is pussy-whipped before or by the time he is married. He is taught that he either conforms to the social notch cut out for him or his sex life will be hobbled and his tender companionship will be zero. He is made to see that women demand security more than logical, principled, or honourable behaviour. By the time his son must go to war, father (with jelly for a backbone) will slam a gun into junior's hand before father will risk the censure of his peers, or make a hypocrite of himself by crossing the investment he has in his own personal opinion or self-esteem. Junior will go to war or father will be embarrassed. So junior will go to war, the true purpose notwithstanding.

Factor 3 - Mother

The female element of human society is ruled by emotion first and logic second. In the battle between logic and imagination, imagination always wins, fantasy prevails, maternal instinct dominates so that the child comes first and the future comes second. A woman with a newborn baby is too starry-eyed to see her child as a wealthy man's cannon fodder or a cheap source of slave labour. A woman must, however, be conditioned to accept the transition to "reality" when it comes, or even sooner. As the transition becomes more difficult to manage, the family unit must be carefully disintegrated, and state-controlled public education and state-operated child-care centres must become more common and legally enforced so as to begin the detachment of the child from the mother and father at an earlier age. Inoculation of behavioural drugs [Ritalin] can speed the transition for the child (mandatory). Caution: A woman's impulsive anger can override her fear. An irate woman's power must never be underestimated, and her power over a pussy-whipped husband must likewise never be underestimated. It got women the vote in 1920.

Factor 4 - Junior

The emotional pressure for self-preservation during the time of war and the self-serving attitude of the common herd that have an option to avoid the battlefield - if junior can be persuaded to go - is all of the pressure finally necessary to propel Johnny off to war. Their quiet blackmailing of him are the threats: "No sacrifice, no friends; no glory, no girlfriends".

Factor 5 - Sister

And what about junior's sister? She is given all the good things of life by her father, and taught to expect the same from her future husband regardless of the price.

Factor 6 - Cattle

Those who will not use their brains are no better off than those who have no brains, and so this mindless school of jelly-fish, father, mother, son, and daughter, become useful beasts of burden or trainers of the same.

Please note that the section of text above, shown in blue, is not an expression of my own personal opinion, but comes from an anonymous document. However, sections of it describe clearly what is without question being applied to the people in many nations of the world today, so it is difficult to discount any of what is said. At the present time, economic warfare is most definitely being waged against normal, innocent people in most countries of the world, and there is every appearance that a major offensive against us is in progress, instigated and orchestrated by the few "Elite" New World Order people who have already caused so much unnecessary death and suffering.

So who are the New World Order people whose aims are to disadvantage and destroy ordinary people through their "Quiet War"? Well, there are several major branches of them, each presenting a benign and caring face to the world and most with large numbers of sincere adherents who have not the slightest idea of the aims and policies of the few people at the top who actually direct and control those organisations. While most operations are carried out in complete secrecy, the most visible people in the ruling bodies form the Bilderberg Group. This comprises 13 Freemasons, 13 Vatican representatives, and 13 Black Mobility people. These 39 people of the Bilderberg Group have offices in Switzerland (the only European country which was never invaded or bombed

during World War One or World War Two) answer to the 13 people who form the Policy Group, which in turn answers to the 9 people of the Round Table. The individuals concerned are typically, powerful financiers, industrialists, statesmen and intellectuals.

The power and influence of these people should not be underestimated. They have infiltrated and subverted the US Congress and Senate, rendering ineffective the checks and balances intended when the Constitution was originally set up. At 3:30 am on Saturday 4th August 1990, a minority of US Senators, maybe ten at most, passed the Senate Intelligence Authorisation Act for Fiscal Year 1991 (S.B. 2834). This bill is not widely known. It was brought to a vote by Senator Sam Nunn in the dead of night when the opposition was gone. It effectively transfers most authority of the United States Government directly into the hands of the President. It gives him the power to initiate war, appropriate public funds, define foreign policy goals, and decide what is important to US national security. It gives the President the power to initiate covert actions (a power never before given to any President) and prevents Congress from stopping the President's initiation of covert actions. It allows the President to use any federal "departments, agencies or entities" to operate or finance a covert operation. It empowers the President to use any other nation or private contractor or person to fund or operate a covert action. It redefines covert actions as operations "necessary to support foreign policy objectives of the United States" which is a definition which is so broad and vague as to be essentially unlimited. It, for the first time ever, officially claims the right of the United States to interfere secretly in the internal "political, economic or military affairs" of other countries in direct and flagrant violation of international law. It requires the President to prepare and deliver a written finding to the Intelligence committees of Congress, but it allows the President to omit "extremely sensitive matters" and authorises the President to claim Executive Privilege if Congress asks too many questions.

Further, there are no penalties in the Bill for violating any of its provisions, including the provision for requiring a finding. That Bill effectively handed all the powers of government to the President, effectively making him the sole ruler of the USA without accountability to anyone.

I suggest that the New World Order people have sufficient influence to ensure that every candidate for President of the USA is a member of the New World Order. That way, they are assured that they have full control of the whole of the USA at all times no matter what the outcome of the "democratic" voting. It is said that Henry Ford stated that customers could have a new Model T car in any colour they wanted, provided that the colour was black. Well, the equivalent is now in place, where the American people can have any President they want, provided that the President is a New World Order man. This information is not even considered secret any more. For example:

"... Some even believe we (the Rockefellers) are part of a secret cabal working against the best interests of the United States, characterising my family and me as 'internationalists' and of conspiring with others around the world to build a more integrated global political and economic structure - one world, if you will. If that's the charge, I stand guilty, and I am proud of it."

—David Rockefeller, *Memoirs* (2002, Random House publishers), page 405

It should not be imagined that the events in the USA have no effect elsewhere. The New World Order people are working on expanding the EU, blurring the identities of individual countries through legislation, reducing the effects of borders and generally moving towards a single entity with one central government. They are actually aimed at producing ten unified areas of the world which they then intend to amalgamate into a single world state governed by them. This is judged to be easier if there are fewer people, so one of their major aims is to reduce the number of people living at the present time. They also need the remaining people to be wholly dependent on them for the essentials of life, which is one reason why they oppose the introduction of any free-energy device, since having an independent source of power would put people outside their direct control and so will not be allowed.

It is important to understand that the New World Order strategy for America is already, just about complete. Just outside the town of Bluemont, Virginia, about forty six miles west of Washington DC, there is an area of wilderness covering what has been described as the toughest granite in the eastern USA. The area is surrounded by signs saying "Restricted Area" and "This installation has been declared a restricted area: Unauthorised entry is prohibited" and photographs, notes, drawings, etc. will be confiscated - Internal Security Act of 1950. The installation is beneath a mountain. Its name is the Western Virginia Office of Controlled Conflict Operations. Its nickname is Mount Weather. It was built under "The Continuity of Government Programme" and the Director of the Agency which built it told the Senate Subcommittee on Constitutional Rights "I am not at liberty to describe precisely what the role and the mission and the capability that we have at Mount Weather".

Mount Weather is under the direct control of FEMA, the Federal Emergency Management Agency which is a New World Order organisation designed to overthrow the present government of the USA, do away with the Constitution and impose a police state to effectively enslave all American citizens. On the surface, that looks like a wild and ridiculous statement, but unfortunately, it is based on solid fact. In March 2003, FEMA became part of the Department of Homeland Security ("DHS") which has blanket control of all of the USA the moment that the President declares a state of national emergency, which he can do for any one of a whole range of minor

situations. The http://en.wikipedia.org/wiki/United_States_Department_of_Homeland_Security entry gives you the current situation on this all-powerful DHS body which suddenly engulfed twenty-two other agencies. This set-up has been created by Executive Orders of the President and those do not need the approval of Congress or the Senate.

FEMA was already provided with excessive powers via Executive Orders:

Executive Order 10955 provides for the takeover of communications.

Executive Order 10997 provides for the takeover of all electric supplies, power, petroleum, gas, fuels and minerals.

Executive Order 10998 provides for the takeover of food resources and farms.

Executive Order 10999 provides for the takeover of all modes of transportation, highways, seaports, etc.

Executive Order 11000 provides for the mobilisation of **all** civilians into work brigades under Government supervision.

Executive Order 11001 provides for the takeover of all health, education and welfare.

Executive Order 11002 designates the Postmaster General to operate a national registration of all persons.

Executive Order 11003 provides for the takeover of airports and aircraft.

Executive Order 11004 provides for the Housing and Finance Authority to relocate communities, designate areas to be abandoned and establish new locations for populations.

Executive Order 11005 provides for the takeover of railroads, inland waterways and storage facilities.

These things are already US law and while they could be benign in operation, they equally could be used for instant enslavement of the entire American population. All it takes is one statement from the President and the entire population could be faced with no food, no roads, no trains, no planes, no medical care, no electricity, no communications, no fuel, transportation into work camps with families being separated in the process. Couldn't possibly happen? Well it did happen to the Jews in World War Two occupied countries, and that was probably organised by the same group of people (the NWO).

Couldn't possibly happen because Senators and Congressmen wouldn't allow it? They will be shipped out to what they think is to be their secure haven during the emergency. Yes, it will be secure, but not a haven as there is already a secret government established in Mount Weather and so the elected people will be surplus to requirements.

Couldn't possibly happen because there are far too many outspoken leaders of the people who would oppose it? Well, reports state that there are some 24,000,000 dossiers on US citizens already in Mount Weather, specifically for the purpose of identifying those people in order that they can be removed in one pre-emptive strike.

Think that it can't happen? Well, it can. The timing will be chosen by the NWO to suit their plans.

But a key question is "why do the NWO people want to do this?" and the answer is quite unexpected. They consider that world population is too large and that the situation is only going to get worse due to a complete lack of population control. Personally, I believe that they are mistaken and that with the use of unlimited free-energy that the production of food and goods can be far greater than at present. However, what I believe does not matter as it is what the NWO people believe is what counts since they are the people taking action.

They state the problem in simplistic terms, namely that the only way to ensure a zero-rate population growth rate is to have the death rate equal to or greater than the birth rate. They see a ruthless totalitarian police state as being the only way to enforce birth control directly and until that is established they are introducing many things to change the ratio of the two rates.

Lowering the birth rate is hampered by improved medical care both at birth and in old age, so homosexuality has been encouraged, but that in itself is not nearly enough, so raising the death rate was also worked on. To that end a nuclear war was suggested and to this day has not been ruled out. Preferred methods are those which look as if they have not been caused by the ruling elite but instead can be classified as "natural" events.

A plague like the Black Death which devastated populations in the past would be desirable, so one was produced synthetically and called AIDS. It was targeted at groups of people which the ruling elite don't like: homosexuals, black people and Hispanics. AIDS was manufactured in Phoenix, Arizona and spread because overpopulation was considered to be a greater threat to the human race than AIDS is. Hepatitis B has also been deliberately used against people.

Civil wars are also used to boost the death rate, particularly in Third World nations and it is frequently found that the 'rebels' causing the war are trained, armed and funded by the CIA and directed to kill mainly civilians and especially females of child-bearing age. Thomas Ferguson, the Latin American case officer for the US State Department's Office of Population Affairs (established in 1975 by Henry Kissinger) made the following statements: "There is a single theme behind all our work; we must reduce population levels. Either they do it our way, through nice clean methods or they will get the kind of mess that we have in El Salvador, or in Iran, or in Beirut. Population is a political problem. Once population is out of control it requires authoritarian government, even fascism, to reduce it. The professionals aren't interested in lowering population for humanitarian reasons. That sounds nice. We look at resources and environmental constraints. We look at our strategic needs, and we say that this country must lower its population, or else we will have trouble. So steps are taken. El Salvador is an example where our failure to lower population by simple means has created the basis for a national security crisis. The government of El Salvador failed to use our programs to lower their population. Now they get a civil war because of it. There will be dislocation and food shortages. They still have too many people there. Civil wars are somewhat drawn-out ways to reduce population. The quickest way to reduce population is through famine, like in Africa or through disease like the Black Death, all of which might occur in El Salvador. If you want to control a country, you have to keep the population down."

Other methods used include spreading the radioactive 'tailings' from uranium mines on US tobacco fields, causing elevated rates of lip, mouth, throat and lung cancer. The use of HAARP equipment in Alaska to trigger hurricanes, earthquakes and tsunamis. US populations in California have been directly sprayed with nerve gas under the pretext of killing the Mediterranean fruit fly. Consequently, deaths from heart disease have rocketed. Dioxin is being dumped into water supplies. There have been deliberate leaks of radioactive and toxic wastes into both the air and water supplies.

If the video has not been wiped off the web, then the video from Walter Burien:

<http://video.google.com/videoplay?docid=6703413885850200097&hl=en> demonstrates the double-bookkeeping which is being operated by the US government where the US people are being told that they are in debt when in fact, "public" funds are massively in profit.

Update 25th April 2009

The following is information coming from Hal Turner. I will leave it up to you to make up your own mind as to its accuracy. Personally, I would assess it as being substantially correct, but you need to decide that for yourself. In passing, it might be mentioned that the UK public news services quote a local expert as stating that there is a 999 chance out of 1000 that the "flu" virus which has already killed 145 people in Mexico is man-made. The fact of having four unrelated virus strains from different species combined in one organism is incredibly unlikely to have happened in nature, and even if it had, it would not have happened in Mexico. Here is what Hal Turner in the USA has to say:

You and your family are about to be killed. Prepare yourselves. It has all been pre-planned and the plan has now begun. Every once in awhile, those of us who watch the big picture and report to you that government is planning something **really** bad, are vindicated. Such is the case right now. In October, 2007, the sub-prime mortgage crisis hit. Credit dried up, a number of banks failed. The economy began to tank and companies started taking losses and laying off workers. There were storm clouds on the financial horizon and everyone knew it.

What few considered was that our government is already saddled with so much debt they cannot hope to afford another Great Depression. They don't have the funds to pay unemployment, welfare, food stamps, free medical care through Medicaid and they have zero chance of borrowing the money to provide it. So, the decision has been made to "cull the herd". They think that they have no choice but to kill off a whole slew of "useless eaters", most of whom live in our major cities. They know that unless they kill them off, there will be so much social chaos that the government will fall, or be overthrown, and they definitely don't want that to happen.

They have already laid the groundwork. Want evidence? Last year, the US government started running commercials **telling you** that a 'flu pandemic was coming. Commercials just like this: Watch Illuminati TV Spot - Flu Inside Job: It Will Happen Again: <http://www.youtube.com/watch?v=m72u5YE21UJ> If that doesn't clue you in, then maybe this will: Your Coffins Were Ordered: <http://www.youtube.com/watch?v=5fSSjOmJv4s>

In January, 2008, the news broke that the Federal Emergency Management Agency (FEMA) had ordered one

million plastic burial containers that can hold 6 bodies each, and that an Alabama company - Polyguard Vaults - had begun manufacturing them. Folks laughed at guys like me when we reported such news. They called us "conspiracy nuts". About six or seven months later, in July, 2008 news broke about 500,000 "burial vaults" sitting in an open field in Georgia. Still unconvinced, the sceptical then got to see an actual video of the coffins as shown here: <http://www.youtube.com/watch?v=jeqjyK5wPk>

We who were previously derided as Conspiracy Nuts were again berated as "wearing tin foil hats" worried about something that was "probably nothing worse than our government preparing for a disaster." Yeah !! Right !! Many of us knew something was up and whatever it was, it meant a lot of dead people.

Model Emergency Health Powers Act (MEHPA) A meeting of the Centre for Law and the Public Health (CLPH) was convened on 5th October 2009. This group is run jointly by Georgetown University Law School and Johns Hopkins Medical School, and was founded under the auspices of the Centre for Disease Control (CDC). The purpose of the October meeting was to draft legislation to respond to a bio-terrorism threat.

After working only 18 days, on 23rd November, CLPH released a 40-page document called the Model Emergency Health Powers Act (MEHPA). This was a "model" law that HHS is suggesting should be enacted by the 50 States in order to handle future public health emergencies such as bio-terrorism. A revised version was released on 21st December containing more specific definitions of a "public health emergency" as it pertains to bio-terrorism and biological agents, and includes the wording for those States that want to use the act for chemical, nuclear or natural disasters.

According to the Association of American Physicians and Surgeons (AAPS), after declaring a "public health emergency", and without consulting with public health authorities, law enforcement, the legislature or courts, a state governor using MEHPA, or anyone he/she decides to empower, can among many things:

- Require any individual to be vaccinated. Refusal constitutes a crime and will result in quarantine.
- Require any individual to undergo specific medical treatment. Refusal constitutes a crime and will result in quarantine.
- Seize any property, including real estate, food, medicine, fuel or clothing, which an official thinks necessary to handle the emergency.
- Seize and destroy any property alleged to be hazardous. There will be no compensation or recourse.
- Draft you or your business into State service.
- Impose rationing, price controls, quotas and transportation controls.
- Suspend any state law, regulation or rule that is thought to interfere with handling the declared emergency.

As of 25th April 2009, this law has been passed in 38 states and Washington, DC.

Microbiologists suddenly start dying: In the four-month period from 12th November 2001 through 11th February 2002, seven world-class microbiologists in different parts of the world were reported dead. Six died of "unnatural" causes, while the cause of the seventh's death is questionable. Also on 12th November 2001, DynCorp, a major government contractor for data processing, military operations and intelligence work, was awarded a US \$322,000,000 contract to develop, produce and store vaccines for the Department of Defence. DynCorp and Hadron, both of which are defence contractors connected to classified research programmes on communicable diseases, have also been linked to a software program known as PROMIS, which may have helped identify and target the victims.

In the six weeks prior to 12th November 2001, two additional foreign microbiologists were reported dead. Some believe there were as many as five more microbiologists killed during the period, bringing the total as high as 14. These two to seven additional deaths, however, are not the focus of this information. This same period also saw the deaths of three people involved in medical research or public health.

- On 12th November 2001, Benito Que, 52, was found comatose in the street near the laboratory where he worked at the University of Miami Medical School. He died on 6th December 2008.
- On 16th November 2001, Don C. Wiley, 57, vanished, and his abandoned rental car was found on the Hernando de Soto Bridge outside Memphis, Tenn. His body was found on 20th December.

- On 23rd November 2008, Vladimir Pasechnik, 64, was found dead in Wiltshire, England, not far from his home.
- On 10th December 2001, Robert Schwartz, 57, was found murdered in his rural home in Loudoun County, Va.
- On 11th December 2001, Set Van Nguyen, 44, was found dead in the airlock entrance to a walk-in refrigerator in the laboratory where he worked in Victoria State, Australia.
- On 9th February 2002, Vladimir Korshunov, 56, was found dead on a Moscow street and
- On 11th February 2002, Ian Langford, 40, was found dead in his home in Norwich, England.

Prior to these deaths, on 4th October 2001, a commercial jetliner travelling from Israel to Novosibirsk, Siberia was shot down over the Black Sea by an "errant" Ukrainian surface-to-air missile, killing all on board. The missile was over 100 miles off-course. Despite early news stories reporting it as a charter, the flight, Air Sibir 1812, was a regular scheduled flight.

According to several press reports, including a 5th December 2001 article by Barry Chamish and one on 13th January 2002 by Jim Rarey (both available at www.rense.com), the plane is believed by many in Israel to have had as many as five passengers who were microbiologists. Both Israel and Novosibirsk are homes for cutting-edge microbiological research. Novosibirsk is known as the scientific capital of Siberia, and home to over 50 research facilities and 13 full universities for a population of only 2.5 million people.

At the time of the Black Sea crash, Israeli journalists had been sounding the alarm that two Israeli microbiologists had recently been murdered, allegedly by terrorists. On 24th November 2001 a Swissair flight from Berlin to Zurich crashed on its landing approach. Of the 33 people on board, 24 were killed, including the head of the haematology department at Israel's Ichilov Hospital, as well as directors of the Tel Aviv Public Health Department and Hebrew University School of Medicine. They were the only Israelis on the flight. The names of those killed, as reported in a subsequent Israeli news story but not matched to their job titles, were Avishai Berkman, Amiramp Eldor and Yaacov Matzner.

Besides all being microbiologists, six of the seven scientists who died within weeks of each other died from "unnatural" causes. Four of the seven were doing virtually identical research -- research that has global, political and financial significance. All of these men were at the absolute top of their respective fields and would be the exact people needed to battle a new bio-weapon spreading planet-wide. They are now all dead by unnatural causes.

FEMA tells counties, "prepare": In December 2008, a county official in north-western Indiana revealed (during a radio show) that during the legally-mandated meetings held with FEMA and the Department of Homeland Security (DHS), different disaster scenarios were revealed to county officials:

They were told that if industry were to collapse, for example General Motors going bankrupt (what a coincidence) resulting in mass unemployment, a depression would soon follow and municipalities could expect to lose 40% of their funds.

Every county in the nation would be required to prepare a "Hazard Mitigation Plan."

The county should prepare a plan to vaccinate the entire population within 48 hours and practice the plan several times. (Gee, now why would they say this last December? Maybe because they knew what was planned).

FEMA asked where mass graves could be placed in the county and would they accept bodies from elsewhere.

The county was asked to make plans for the "hardening" of police stations and fire stations, and the construction of hardened bunker-type buildings around town.

The county was asked to make plans for the possibility of up to 400,000 refugees from Chicago.

The super-wealthy were told what was planned!

In February 2009, something really odd and very ominous broke in the news: Panasonic Corporation issued orders to all its top executives outside of Japan to sell their homes and make certain they moved themselves and their families back to Japan not later than the end of September 2009.

This instruction was reported by Bloomberg Business News and it specifically mentions that Panasonic feared the outbreak of "new flu strains". Many of us wondered how the hell Panasonic could know about new flu outbreaks to occur 6 months later?

Cemeteries were told to begin digging mass graves.

In March 2009, news broke in several areas of the USA revealing that government cemeteries - many of them military - had suddenly begun preparing mass graves. Acres and acres of mass graves, complete with concrete vaults designed to hold multiple plastic coffins and accommodate hundreds of thousands of dead in each cemetery.

Again, the nay-sayers laughed. . . . until we got pictures and video of one mass grave being built as shown here: <http://www.youtube.com/watch?v=tevCNjgxnhs>

On 13th April 2009, just three days before Barak Obama's official state visit, a "flu outbreak" struck Mexico City with a vengeance. The first case was seen in Mexico on 13th April 2009. The outbreak coincided with President Barack Obama's trip to Mexico City on 16th April. Obama was received at Mexico's anthropology museum in Mexico City by Felipe Solis, a distinguished archaeologist. . . . who died the following day from symptoms similar to flu.

Bio-Weapon! On 22nd April 2009, CNN reported that viruses from the U.S. Army Bio weapons Lab at Fort Detrick, MD had gone missing. What type of viruses? 'Flu !!

Johns-Hopkins Doctor says 'Flu is MAN-MADE !! From CDC via Wikipedia: Anne Schuchat, director of CDC's National Centre for Immunization and Respiratory Diseases, said that the American cases were found to be made up of genetic elements from four different flu viruses -- North American swine influenza, North American avian influenza, human influenza A virus subtype H1N1, and swine influenza virus typically found in Asia and Europe.

In a discussion this morning with a cell biologist and medical doctor working at Johns Hopkins, they said they thought this new, 4-part flu combination is highly unusual and looks like it could be man-made. Especially because it has an avian strain. My doctor friend (who is Taiwanese) explained that in Asia, it's common for a avian-swine-human flu to happen naturally, but this virus first showed up in Mexico, where pigs and ducks are not usually raised together. Also, recombination of more than two different flu viruses is extremely rare. I'm just repeating what he said as an expert in the field. He says the CDC needs to explain if there is a possibility that we are under a bio-weapon attack.

By late night on 22nd April 2009 the trouble in Mexico had grown. A total of 1,000 flu cases had been reported in Mexico City and 60 people had already died. That's a 6% mortality rate. Remember that number: SIX PERCENT.

Mexico gets worse; US gets hit on 2 coasts. By 23rd April, the outbreak had infected up to 2,300 people in Mexico City, spread to Los Angeles and in a dramatic turn of events, 75 school kids in a New York City Catholic Prep School 2,500 miles away from Los Angeles, suddenly took ill with 'flu-like symptoms. CDC has now confirmed 20 of those school kids have the new flu!

Mortality Rate: Earlier, I asked you to bear in mind the initial mortality rate of this new 'flu: 6%. The worst 'flu pandemic to strike the planet took place from 1918 - 1920 and it was known as "The Spanish Flu". It killed a minimum of 20 million, but according to Wikipedia five times more in the lesser developed nations of the world adding another 100 million. It's mortality rate was two point five percent (2.5%). This new 'flu has already shown at least a six percent death rate. Our planet has about 6 billion people on it. If 50% of the planet gets this new flu as happened with the 1918 - 1920 outbreak, that translates into 3 Billion infected worldwide this time. A 6% mortality rate for 3 billion infected is at least 180 million dead in the civilized nations of the world and, presumably, five times that number in the other parts of the planet. That could total just over one billion dead.

Personally, I suspect that the estimate of a 6% fatality rate is too low as the initial reports from Mexico appear to be running around 10%. However, bad and all as the situation seems, there is a method of protection which is not expensive and which is likely to be completely effective. I am not generally into "alternative" therapies but Ravi Raju who is an extremely reliable source of information and who has had some years of experience with this technique and who has seen many spectacular cures has kindly shared the following information. The method involves the use of colloidal silver, which is a suspension of very, very tiny charged particles of pure silver suspended in distilled water. The following information is presented here because, and only because, it is highly likely that no other effective treatment for dealing with this new virus will be available to most of the infected people.

Due to legal considerations, please understand that because the following information is presented here, it must not be considered to be a recommendation from me that you should follow the procedure or inhale, drink or in any other way use the resulting liquid. Nor are any representations made to the effectiveness or otherwise of this or any other related procedure. The following material must be

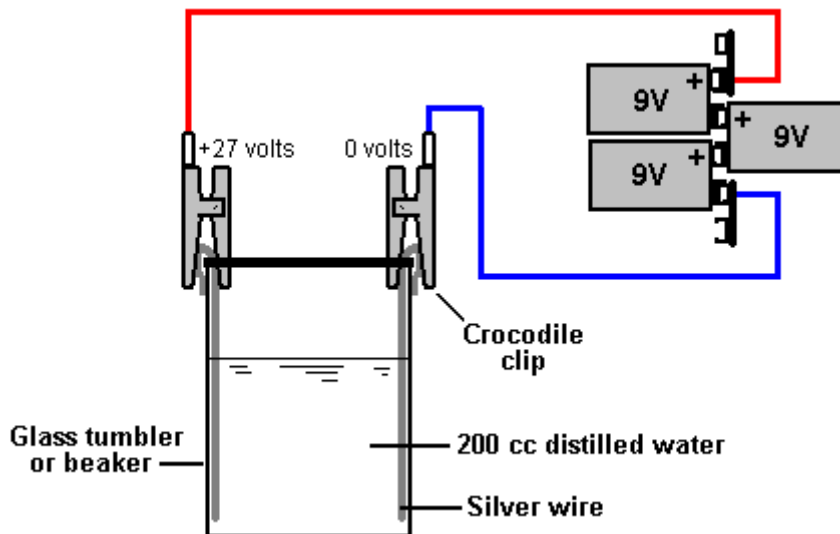

considered to be presented here solely for information purposes and not a recommendation that you or anyone else should make or use this substance.

Having said that, let me explain how a friend of mine has made and used colloidal silver very successfully for two years and experienced only highly positive effects from it.

Making Colloidal Silver. In broad outline, all that is necessary is to apply 27 volts DC to two electrodes made from 99.99% pure silver, placed in distilled water for about ten minutes. The most simple equipment can be used to achieve this. This is the complete set-up:

Not exactly staggeringly difficult, is it? The batteries are not shown pressed together as they are when the apparatus is ready for use. When they are, it looks like this:

The components needed are:

- One glass tumbler or glass beaker capable of holding 200 ccs of water (see below).
- A length of solid wire which is 99.99% pure silver.
- Some distilled water.
- Two crocodile clips.
- Three small 9-volt batteries.
- Two battery connectors for the batteries (or the tops off old batteries of that type).
- A piece of fine emery paper or sandpaper.
- Some sterile cotton wool.
- One glass stirring rod (a glass thermometer will do).

Assembling the equipment:

1. Connect the red positive lead of one of the battery connectors to one crocodile clip.
2. Connect the black negative lead of the other battery connector to the other crocodile clip.

3. Push the three batteries together as shown above and connect the battery connectors to the unconnected battery terminals. This produces a 27-volt DC supply between the two crocodile clips, so be careful not to allow them to touch each other and discharge the batteries.
4. Cut two lengths of the silver wire slightly longer than the height of the tumbler and bend the tops over as shown.
5. Silver tarnishes to a black colour and so needs to be cleaned using the emery paper or sandpaper. After it is scraped to produce a clean, shiny surface, and then clean any remaining particles off them, using the sterile cotton wool. Do **not** use any kind of chemicals to clean the silver - purity of water, silver and glassware is vital.
6. Put about 200 ccs of distilled water into the tumbler. It is very important that the silver is 99.9% pure (or higher) and that nothing is added to it. For example, if the water contained a grain of salt, then the colloidal silver would react with the salt and make the treatment completely ineffective.
7. Hook the silver wires over opposite sides of the tumbler as shown and grip them with the crocodile clips. It is an advantage if the bend of the wire grips the side of the glass container securely and the clip is attached so that it straddles the glass and strengthens the grip, holding the wire more securely in place.

Processing the water:

Using the glass stirring rod, keep stirring the water gently and after ten to thirteen minutes the water may have a uniform opaque appearance as shown here:

In some instances, the water remains perfectly clear and the colloidal silver is only seen when a laser is shone through the water (the beam causes the silver particles to shine brightly). Lift the silver wires gently out of the water and disconnect the crocodile clips. One wire will have a black coating due to oxygen being released on its surface by the process and the other wire may have a grey coating. Clean the wires with the cotton wool, although a clean tissue also seems to work well. Be careful not to let the crocodile clips touch, and to play safe, either clip them to some non-conducting item or alternatively, unplug one of the batteries to disconnect the circuit. If the cleaned silver wires are placed in a clean, sealed, airtight plastic bag, then they will stay untarnished and not need additional cleaning before they are used again.

Using the water:

It is possible to take the water by taking two teaspoonfulls, holding it in the mouth for at least one minute and then swallowing it - that is the complete dosage. Holding it in the mouth is effective as it absorbs quickly through the thin skin covering the inside of the mouth, and doing this fully sterilises the whole of the mouth. However, a very much better way is to use a standard nebuliser as that makes sure that only the tiniest particles are absorbed. For this, the water is placed in the reservoir of an ordinary nebuliser:

The nebuliser is then assembled and switched on. The lungs are filled completely by breathing in through the nebuliser using the mouth. The next full breath is then taken through the nose. Doing this for 6 to 7 minutes is quite sufficient. This would normally be done once per day, just before going to bed at night, but if the infection is really severe, then twice per day is recommended. While it is possible to store the colloidal silver solution in a brown glass bottle placed in a cool dark cupboard, it is recommended that a new solution is made up each day. This is quick to do, and the main effect of the solution is caused by very minute charged particles of silver in the water. To be sure that the water is fully charged, it is definitely worthwhile to make up a new batch each time. Be sure not to brush the black coated wire when stirring as that can dislodge black particles which contaminate the water, turning it brown and making it unusable. If you are using a nebuliser which only takes a few ccs, then a smaller glass container and much less than 200 ccs can be processed, although more care is needed when stirring to avoid brushing against the wires.

While I am highly reluctant to make spectacular claims for this process - claims which will sound like a "snake oil" pitch, it is only reasonable that you should be aware of what the effects have been in past cases. As this information comes from a highly reliable and experienced source, it should be considered carefully no matter what your final opinion is.

1. This process has cured terminally-ill cancer patients.
2. It has neutralised all known viruses and harmful bacteria, including AIDS.
3. It has cleared the common cold within one hour (and medical science claims that the common cold can't be cured).
4. There is direct experience of six different people being cured of serious lung conditions.
5. One person has had severe diabetes reduced to just a very mild form.
6. High blood pressure ("hypertension") has been returned to normal.

I do apologise for presenting a list like this, especially since some of these actual cases sound so improbable, but as these are genuine, bona fide results of treatment attested to by a most reliable source, it is difficult not to present the facts, no matter how difficult readers may find it to accept them.

The distilled water, glass stirring rod and should you want it, a calibrated beaker as shown in the photographs above, can be got from laboratory suppliers. At this time, suitable nebulisers can be bought on the internet for about £35. The 99.99% pure silver wire shown in the photographs above happens to be 2.36 mm (3/32") in diameter, but this diameter is not at all critical, although the purity of the silver is very important and should be at least 99.9% pure.

There is one point which should not be ignored. If you were to become infected with this virus and it's fatality rate were, say a massive 10%, then without any special treatment, you have nine chances out of ten of surviving it. So, while the situation looks scary, most people will either not get infected or will survive the infection.

Here are some additional facts about colloidal silver, prepared electrically as shown above:

1. In July 2009, one of the members in a Yahoo forum reported that he had been infected with the swine 'flu virus via a relative. Using colloidal silver and one or two similar treatments (while avoiding anti-oxidants such as Vitamin C and Vitamin E) he cleared the infection in just eighteen hours while the relative was still ill five days later.

2. According to the US Environmental protection Agency Poison Control Centre, this colloidal silver is considered harmless and a daily intake of 14 teaspoons of 5 parts per million colloidal silver is quite safe for the first 70 years. So, treating an infection with one teaspoon of colloidal silver per hour is perfectly safe. A normal treatment rate for an infection is a teaspoon dose three times per day, but clearly, a greater rate of intake is perfectly safe if you wish to raise the dosage. If that is the case, then stick to one teaspoon at a time and take it more often.
3. Colloidal silver does more than just kill disease-causing organisms, it also promotes major bone growth and accelerates the healing of injured tissues by over 50%. It promotes healing in skin and other soft tissues in a way which is unlike any other known natural process. An example of this is the case of Glen Roundtree, a 32 year old man, who was clearing brush and trees in his parent's yard when some petrol left on his hands after filling the chain saw ignited. He burned for over 30 seconds as he tried to get the fire out. Glen suffered third degree burns on his hands and face. His mother's friend brought him some colloidal silver. He drank it and sprayed it on his face often. He was able to stop taking morphine immediately. Within three and a half weeks his recovery was so advanced that his hospital attendant did not believe he was the same burns patient. In less than three months his face was completely healed with absolutely no scarring. The planned reconstructive surgery for his melted nose and ear were cancelled.
4. In the presence of colloidal silver, cancer cells change back to normal cells regardless of their location in the body. The presence of silver ions regenerates tissues and eliminates cancer cells and other abnormal cells. For many years, Dr Bjorn Nordstrom of Sweden's Karolinska Institute has used silver in his cancer treatment methods. He reports that he has successfully cured patients who had been diagnosed as "terminally ill" by other doctors. He also discovered that the silver was promoting the growth of a new kind of cell which looked like the cells of children. These cells grew fast, producing a diverse and surprising assortment of primitive cell forms able to multiply at great rate and then change into the specific cells of an organ or tissue which had been injured, even in patients over 50 years old. In no case were there any undesirable side effects. He also discovered that previously untreatable osteomyelitis and bones which refused to knit, could be healed quickly by applying a silver-impregnated nylon dressing attached to a small battery. This worked so well that it has become standard practice today when dealing with bones which refuse to knit.
5. Dr Paul Farber suffered a tick bite which overnight, gave him the crippling Lyme's Disease. There was no satisfactory treatment so he searched medical literature to see if he could find anything to help. He finally found Dr Crookes' comments about colloidal silver killing a microbe in six minutes or less. He also found the research and development work done on colloidal silver by Dr Moyer, Dr Bretano and Dr Margraf. Dr Farber started taking colloidal silver with spectacular results, clearing the bacteria out of his body in a short time - colloidal silver kills the Lyme's Disease bacteria.
6. When Czechoslovakia was under communist occupation, Soviet intelligence came across a domestic disinfectant which was capable of neutralising not only their existing biological weapons, but also those under development. The Soviets quickly dismantled the factory which was producing this product and moved the equipment, documentation and even the staff to the Soviet Union. Following this, no one heard of the disinfectant again. In a study of infected wells, it completely destroyed typhus, malaria, cholera, and amoebic dysentery. This domestic disinfectant is a variety of colloidal silver.
7. Antibiotics have no impact whatsoever on viruses. This means that taking any antibiotic will have no effect on a viral infection. Worse still, many forms of bacteria are now resistant to most antibiotics. Colloidal silver will kill both and boost your natural immune system at the same time.

A website which you may care to check out is www.natural-immunogenics.com

Update 1st May 2009

Medical doctor Kevin Middleton of the USA has this to say:

Swine Flu Hoax?

So who are the swine behind the swine flu? That's what I wanted to know. Whenever I begin to see blaring headlines regarding the word "pandemic", I make a call to Dr. Lorraine Day, the former chief of Orthopaedic Surgery at USF. Not one to mince words, and a dogged researcher, I can count on Lorraine to give me the big picture behind the headlines. I made that call yesterday. Her first words, underscored with a hearty laugh, were "It's just another hoax!".

Here's the long and short of it according to Lorraine. First, the government is continuing on it's path to incite panic so we will ideally demand to have protection from these "killer" viruses via vaccinations. This would help avert a less popular mandatory vaccination program, which is what the Elite would like to see happen. Lorraine is also

quick to point out that truly noxious vaccines are being developed in laboratories, vaccines which combine human and animal viruses that can seriously compromise our immune systems if we allow them to be administered to us.

Secondly, she said that the Centre for Disease Control needed to move their stockpiles of the flu drug Tamiflu, which didn't make it out to the masses during the last panic, which was the 'bird flu'. I find it interesting that Tamiflu was supposedly created as the antidote to bird flu, but the CDC now says it actually works just fine for swine flu too. It would appear that the stuff is quite non-specific in nature for what is considered to be a very specific strain of flu. Hummm. Anyway, pharmacy chains such as CVC are now stocking up in preparation for the "pandemic".

As an aside, it may not surprise you to know that former Defence Secretary Donald Rumsfeld is a major stockholder in Gilead Sciences, a California bio tech firm that owns the rights to Tamiflu. A CNN report from 2005, when we were being threatened with the bird flu, put Rumsfeld's holdings somewhere between \$5,000,000 to \$25,000,000. This is the same gentleman who brought us the excitotoxin Aspartame, now known to cause serious neurological problems in humans. But, less I digress.....

Lorraine went on to say that 12, 60, even 120 deaths from flu do not make a pandemic. More than 500,000 people a year die from various flu viruses. There are still active flu strains out there from all of the usual sources. In fact, it was just reported that 2 young people in the Sacramento area were tested to have been infected with the swine flu virus, but, no worries, they recovered from their flu in 24 hours. Sounds just like the flu that's been going around through my friends and other acquaintances over the past few weeks in Sacramento.

To further the story, she said that Prince Charles recently pushed for the subject of Developmental Sustainability be pushed to the top of the G-20 agenda. According to Dr. Day "Developmental Sustainability" is the code phrase for de-population. As you may recall, Charles' father, Prince Phillip, when asked what he would like to come back as, if he had another life, said "A virus". The idea was that he would then be able to kill off the useless members of society. What a gentleman.

In short, Lorraine says, do not worry. Just do your body a favour by eating a good clean diet full of fresh vegetables and fruits, get some sunshine and fresh air, turn to your spiritual practice, relax and, under no circumstances, allow yourself to be vaccinated. We're all exposed to flu bugs, but if you can keep your immune system strong, you have nothing to worry about and the only swine involved here are those who are trying to keep us in fear.

Critical Alert: The Swine Flu Pandemic – Fact or Fiction?

American health officials declared a public health emergency as cases of swine flu were confirmed in the U.S. Health officials across the world fear this could be the leading edge of a global pandemic emerging from Mexico, where seven people are confirmed dead as a result of the new virus.

On Wednesday April 29th 2009, the [World Health Organization \(WHO\) raised its pandemic alert level](#) to five on its six-level threat scale, which means that they have determined that the virus is capable of human-to-human transmission. The initial outbreaks across North America reveal an infection already travelling at higher velocity than did the last official pandemic strain, the 1968 Hong Kong flu.

Phase 5 had never been declared since the warning system was introduced in 2005, then it was in response to the [avian influenza](#) crisis. Phase 6 means that a pandemic is under way. WHO now openly states [it is not possible to contain the spread of this infection](#) and recommends mitigation measures, not restricting travel or closing borders.

However, a pandemic does not necessarily mean what you think it does, it is **NOT** black-plague carts being hauled through the streets piled high with dead bodies. Nor does it mean flesh-eating zombies wandering the streets feeding on the living. All a pandemic means is that a new infectious disease is spreading throughout the world.

The number of fatalities, and suspected and confirmed cases across the world changes, depending on the source, so your best bet -- if you want the latest numbers -- is to use [Google Maps' Swine Flu Tracker](#).

Several nations have imposed travel bans, or made plans to quarantine air travellers who present symptoms of swine flu, such as:

- Fever of more than 100°F
- Coughing
- Runny nose and/or sore throat
- Joint aches
- Severe headache
- Vomiting and/or diarrhoea
- Lethargy
- Lack of appetite

Top global flu experts are trying to predict how dangerous the new swine flu strain will be, as it became clear that they had little information about the outbreak in Mexico. It is as yet unclear how many cases occurred in the month or so before the outbreak was detected. It's also unknown whether the virus was mutating to be more lethal, or less lethal.

Much Fear Mongering is Being Promoted

I suspect you have likely been alarmed by the media's coverage of the swine flu scare. It has a noticeable subplot - preparing you for draconian measures to combat a future pandemic as well as forcing you to accept the idea of mandatory vaccinations.

[On April 27, Time magazine published an article](#) which discusses how dozens died and hundreds were injured from vaccines as a result of the 1976 swine flu fiasco, when the Ford administration attempted to use the infection of soldiers at Fort Dix as a pretext for a mass vaccination of the entire country.

Despite acknowledging that the 1976 farce was an example of "how not to handle a flu outbreak", the article still introduces the notion that officials "may soon have to consider whether to institute draconian measures to combat the disease".

Fortunately [some respectable journalists](#) recognize this and are [seeking to spread a voice of reason](#) to the fear which is being promoted by the majority of the media.

WHO and CDC Pandemic Preparedness is Seriously Broken

The pandemic warning system has failed, as it simply doesn't exist, even in North America and Europe. To improve the system, massive new investments in surveillance, scientific and regulatory infrastructure, basic public health, and global access to common sense interventions like vitamin D optimisation are required.

According to the Washington Post, the CDC did not learn about the outbreak until six days after Mexico had begun to impose emergency measures. There should be no excuses. The paradox of this swine flu panic is that, while totally unexpected, it was accurately predicted. Six years ago, Science dedicated a major story to evidence that "after years of stability, the North American swine flu virus has jumped onto an evolutionary fast-track". However, maybe this is precisely what public health authorities desire.

This is NOT the First Swine Flu Panic

My guess is that you can expect to see a lot of panic over this issue in the near future. But the key is to remain calm -- this isn't the first time the public has been warned about swine flu. The last time was in 1976, right before I entered medical school and I remember it very clearly. It resulted in the massive swine flu vaccine campaign. Do you happen to recall the result of this massive campaign? Within a few months, claims totalling \$1.3 billion had been filed by victims who had suffered paralysis from the vaccine. The vaccine was also blamed for 25 deaths. However, several hundred people developed crippling Guillain-Barré Syndrome after they were injected with the swine flu vaccine. Even healthy 20-year-olds ended up as paraplegics. And the swine flu pandemic itself? It never materialised.

More People Died From the Swine Flu Vaccine than Swine Flu!

It is very difficult to [forecast a pandemic](#), and a rash response can be extremely damaging. To put things into perspective, malaria kills 3,000 people EVERY DAY, and it's considered "a health problem"... But of course, there are no fancy vaccines for malaria that can rake in billions of dollars in a short amount of time.

One Australian news source, for example, states that even a mild swine flu epidemic could lead to the deaths of 1.4 million people and would reduce economic growth by nearly \$5 trillion dollars. Give me a break!! If this doesn't sound like the outlandish cries of the pandemic bird-flu I don't know what does. Do you remember when

President Bush said [two million Americans would die as a result of the bird flu](#)? In [2005](#), [2006](#), [2007](#), and again in [2008](#), those fears were exposed as little more than a cruel hoax, designed to instil fear, and [line the pocketbooks of various individuals](#) and industry. I became so convinced by the evidence AGAINST the possibility of a bird flu pandemic that I wrote a New York Times bestselling book, [The Bird Flu Hoax](#), all about the massive fraud involved with the epidemic that never happened.

What is the Swine Flu?

Regular swine flu is a contagious respiratory disease, caused by a type-A influenza virus which affects pigs. The current strain, A(H1N1), is a new variation of an H1N1 virus -- which causes seasonal flu outbreaks in humans -- and which also contains genetic material of bird and pig versions of the flu. Interestingly enough, this version has never before been seen in either human or animal, which I will discuss a bit later. This does sound bad, but not so fast. There are a few reasons not to jump to the conclusion that this is the deadly pandemic we've been told would occur in the near future (as if anyone could predict it without having some sort of inside knowledge).

Why a True Bird-Flu or Swine-Flu Pandemic is HIGHLY Unlikely

While in my opinion it is highly likely factory farming is responsible for producing this viral strain, I believe there is still no cause for concern. You may not know this, but all H1N1 'flu's are descendants of the 1918 pandemic strain. However, the reason why the 'flu shot may, or may not, work from year to year, is due to mutations. Therefore, there is no vaccine available for this current hybrid flu strain, and naturally, this is feeding the fear that millions of people will die before a vaccine can be made.

However, let me remind you of one very important fact here.

Just a couple of months ago, scientists concluded that the 1918 flu pandemic which killed 50-100 million people worldwide in a matter of 18 months -- which all these worst case scenarios are built upon -- was [NOT due to the flu itself](#) !! Instead, they discovered that the real culprit was strep infections. People with influenza often get what is known as a "super-infection" with a bacterial agent. In 1918 it appears to have been *Streptococcus pneumoniae*. Since using modern medicine, strep is much easier to treat than the 'flu, researchers concluded that a new pandemic would likely be much less dire than it was in the early 20th century. Others, such as evolutionary biologist Paul Ewald, claim that a pandemic of this sort simply cannot happen, because in order for it to occur, the world has to change. Not the virus itself, but the world. In a previous interview for Esquire magazine, in which he discusses the possibility of a bird flu pandemic, he states:

"They think that if a virus mutates, it's an evolutionary event. Well, the virus is mutating because that is what viruses and other pathogens do. But evolution is not just random mutation. It is random mutation coupled with natural selection; it is a battle for competitive advantage among different strains generated by random mutation.

For bird flu to evolve into a human pandemic, the strain that finds a home in humanity has to be a strain that is both highly virulent and highly transmissible. Deadliness has to translate somehow into popularity; H5N1 has to find a way to kill or immobilise its human hosts, and still find other hosts to infect. Usually that doesn't happen".

Ewald goes on to explain that evolution in general, is all about trade-offs, and in the evolution of infections the trade-off is between virulence and transmissibility. What this means is that in order for a "bird flu" or "swine flu" to turn into a human pandemic, it has to find an environment that favours both deadly virulence and ease of transmission. People living in squalor on the Western Front at the end of World War I generated such an environment, from which the epidemic of 1918 could arise. Likewise, crowded chicken farms, slaughterhouses, and jam-packed markets of eastern Asia provide another such environment, and that environment gave rise to the bird flu -- a pathogen that both kills and spreads, in birds, but not in humans.

Ewald says:

"We know that H5N1 is well adapted to birds. We also know that it has a hard time becoming a virus that can move from person to person. It has a hard time without our doing anything. But we can make it harder. We can make sure it has no human population in which to evolve transmissibility. There is no need to rely on the mass extermination of chickens. There is no need to stockpile vaccines for everyone. By vaccinating just the people

most at risk -- the people who work with chickens and the caregivers -- we can prevent it from becoming transmissible among humans. Then it doesn't matter what it does in chickens".

Please remember that, despite the fantastic headlines and projections of MILLIONS of deaths, the H5N1 bird flu virus killed a mere 257 people worldwide since late 2003. As unfortunate as those deaths are, 257 deaths worldwide from any disease, over the course of five years, simply does not constitute an emergency worthy of much attention, let alone fear! Honestly, your risk of being killed by a lightning strike in the last five years was about 2,300% higher than your risk of contracting and dying from the bird flu. I'm not kidding! In just one year (2004), more than 1,170 people died from lightning strikes, worldwide. So please, as the numbers of confirmed swine flu cases are released, keep a level head and don't let fear run away with your brain.

So is the Swine Flu Getting More or Less Dangerous?

On Sunday, 26th April 2009, The Independent reported that more than 1,000 people had contracted the swine flu virus in Mexico, but by the afternoon that same day, Mexican President Calderon declared that more than two-thirds of the 1,300 thought to have contracted the disease had been given a clean bill of health and sent home.

Additionally, the number of actual confirmed cases appears to be far lower than reported in many media outlets, leading me to believe that many reporters are interchanging the terms "suspected cases" and "confirmed cases". Interestingly Mexico is the ONLY country in the world where someone has actually died from this disease. [Mexico has reported 159 fatalities in flu-like cases in recent days](#), seven of which have been confirmed as swine-flu. Another 19 patients have been confirmed as having swine flu but surviving. Although [some insiders at WHO](#) believe that these numbers are seriously inflated and could actually be as low as single digits.

By contrast, the United States has had 109 confirmed cases, five hospitalisations and no deaths of US Citizens. On [April 29th CNN reported the first swine fatality in the US](#), however this was actually a child from Mexico who died in Texas. According to the [World Health Organization's Epidemic and Pandemic Alert and Response site](#); as of April 30 there are:

- 109 in U.S. -- 1 death (from Mexican child that died in Texas) ([reported by CDC as of April 30](#))
- 26 in Mexico -- 7 deaths
- 19 in Canada -- 0 deaths
- 13 in Spain -- 0 deaths
- 8 in United Kingdom -- 0 deaths
- 3 in Germany -- 0 deaths
- 2 in Israel -- 0 deaths
- 1 in Switzerland -- 0 deaths
- 1 in Austria -- 0 deaths
- 1 in Netherlands -- 0 deaths

Additionally, nearly all suspected new cases have been reported as mild. Personally, I am highly sceptical. It simply doesn't add up to a real pandemic. But it does raise serious questions about where this brand new, never-before-seen virus came from, especially since it cannot be contracted from eating pork products, and has never before been seen in pigs, and contains traits from the bird flu -- and which, so far, only seems to respond to Tamiflu. Are we just that lucky, or... what?

Your Fear Will Make Some People VERY Rich in Today's Crumbling Economy

According to the Associated Press at least one financial analyst estimates up to \$388 million worth of Tamiflu sales in the near future -- and that's without a pandemic outbreak. More than half a dozen pharmaceutical companies, including Gilead Sciences Inc., Roche, GlaxoSmithKline and other companies with a stake in 'flu treatments and detection, have seen a rise in their shares in a matter of days, and will likely see revenue boosts if the swine-flu outbreak continues to spread.

As soon as Homeland Security declared a health emergency, 25% (about 12 million doses) of Tamiflu and Relenza treatment courses were released from the nation's stockpile. However, beware that the declaration also allows unapproved tests and drugs to be administered to children. Many health and government officials are more than willing to take that chance with your life, and the life of your child. But are you?

Remember, Tamiflu went through some rough times not too long ago, as the dangers of this drug came to light when, in 2007, the [FDA finally began investigating some 1,800 adverse event reports related to the drug](#). Common side effects of Tamiflu include:

- Nausea
- Vomiting

- Diarrhoea
- Headache
- Dizziness
- Fatigue
- Cough

All in all, the very symptoms you're trying to avoid. More serious symptoms included convulsions, delirium or delusions, and 14 deaths in children and teens as a result of neuropsychiatric problems and brain infections (which led Japan to ban Tamiflu for children in 2007). And that's for a drug that, when used as directed, only reduces the duration of influenza symptoms by 1 to 1½ days, according to the official data. But to make matters worse, some patients with influenza are at HIGHER risk for secondary bacterial infections when on Tamiflu and secondary bacterial infections, as I mentioned earlier, were likely to have been the REAL cause of the mass fatalities during the 1918 pandemic!

Where did This Mysterious New Animal-Human Flu Strain Come From?

Alongside the fear-mongering headlines, I've also seen increasing numbers of reports questioning the true nature of this virus. And rightfully so. Could a mixed animal-human mutant like this occur naturally? And if not, who made it, and how was it released? Not being one to dabble too deeply in conspiracy theories, I don't have to strain very hard to find actual facts to support the notion that this may not be a natural mutation, and that those who stand to gain have the wherewithal to pull off such a stunt.

Just last month I reported on the [story](#) that the American pharmaceutical company Baxter was under investigation for distributing the deadly avian flu virus to 18 different countries as part of a seasonal flu vaccine shipment. Czech reporters were probing to see if it may have been part of a deliberate attempt to start a pandemic; as such a "mistake" would be virtually impossible under the security protocols of that virus.

The H5N1 virus on its own is not very airborne. However, when combined with seasonal flu viruses, which are more easily spread, the effect could be a potent, airborne, deadly, biological weapon. If this batch of live bird flu and seasonal flu viruses had reached the public, it could have resulted in dire consequences. There is a name for this mixing of viruses; it's called "reassortment", and it is one of two ways in which pandemic viruses are created in the lab. Some scientists say the most recent global outbreak -- the 1977 Russian flu -- was started by a virus created and leaked from a laboratory.

Another example of the less sterling integrity of Big Pharma is the case of Bayer, who sold millions of dollars worth of an injectable blood-clotting medicine to Asian, Latin American, and some European countries in the mid-1980s, even though they knew it was [tainted with the AIDS virus](#). So while it is morally unthinkable that a drug company would knowingly contaminate flu vaccines with a deadly flu virus such as the bird-flu or swine-flu, it is certainly not impossible, and it has already happened more than once.

But there seems to be no repercussions or hard feelings when industry oversteps the boundaries of morality and integrity and enters the arena of obscenity. Because, lo and behold, which company has been chosen to head up efforts, along with WHO, to produce a vaccine against the Mexican swine flu? Baxter !! Despite the fact that ink has barely dried on the investigative reports from their should-be-criminal "mistake" against humanity.

According to other sources, a top scientist for the United Nations, who has examined the outbreak of the deadly Ebola virus in Africa, as well as HIV/AIDS victims, has concluded that the current swine flu virus possesses certain transmission "vectors" that suggest the new strain has been genetically-manufactured as a military biological warfare weapon. The UN expert believes that Ebola, HIV/AIDS, and the current A-H1N1 swine flu virus are biological warfare agents. In addition, Army criminal investigators are looking into the possibility that disease samples are missing from bio labs at Fort Detrick -- the same Army research lab from which the 2001 anthrax strain was released, according to a recent article in the Fredrick News Post. In February, the top bio-defence lab halted all its research into Ebola, anthrax, plague, and other diseases known as "select agents", after they discovered virus samples that weren't listed in its inventory and might have been switched with something else.

Factory Farming Maybe Source of Swine Flu

Another theory as to the cause of swine-flu might be factory farming. In the United States, pigs travel coast to coast. They can be bred in North Carolina, fattened in the corn belt of Iowa, and slaughtered in California. While this may reduce short-term costs for the pork industry, the highly contagious nature of diseases like influenza (perhaps made further infectious by the stresses of transport) needs to be considered when calculating the true cost of long-distance live animal transport. The majority of U.S. pig farms now contain more than 5,000 animals each. With a group of 5,000 animals, if a novel virus shows up it will have more opportunity to replicate and potentially spread than in a group of 100 pigs on a small farm. With massive concentrations of farm animals in which to mutate, these new swine-flu viruses in North America seem to be on an evolutionary fast track, jumping and reassorting between species at an unprecedented rate.

Should You Accept a Flu Vaccine -- Just to be Safe?

Watch the video above to see ridiculous 1976 commercials promoting Swine Flu shots. As stated in the New York Times¹⁴ and elsewhere, flu experts have no idea whether the current seasonal flu vaccine would offer any protection whatsoever against this exotic mutant, and it will take months to create a new one. But let me tell you, getting vaccinated now would not only offer no protection and potentially cause great harm, it would most likely be loaded with toxic mercury which is used as a preservative in most flu vaccines.

I've written extensively about the [numerous dangers \(and ineffectiveness\) of flu vaccines](#), and why I do not recommend them to anyone. So no matter what you hear -- even if it comes from your doctor -- don't get a regular flu shot as they rarely work against seasonal flu, and certainly can't offer protection against a never-before-seen strain. Currently, the antiviral drugs Tamiflu and Relenza are the only drugs that appear effective against the (human flu) H1N1 virus, and I strongly believe taking Tamiflu to protect yourself against this new virus could be a serious mistake -- for all the reasons I already mentioned above. But in addition to the dangerous side effects of Tamiflu, there is also growing evidence of resistance against the drug. In February, the pre-publication and preliminary findings journal called Nature Precedings published a paper on this concern, stating¹⁵: [The dramatic rise of oseltamivir \[Tamiflu\] resistance in the H1N1 serotype in the 2007/2008 season and the fixing of H274Y in the 2008/2009 season has raised concerns regarding individuals at risk for seasonal influenza, as well as development of similar resistance in the H5N1 serotype \[bird flu\]. Previously, oseltamivir resistance produced changes in H1N1 and H3N2 at multiple positions in treated patients. In contrast, the recently reported resistance involved patients who had not recently taken oseltamivir.](#)

It's one more reason not to bother with this potentially dangerous drug and, once a specific swine-flu drug is created, you can be sure that it has not had the time to be tested in clinical trials to determine safety and effectiveness, which puts us right back where I started this article -- with a potential repeat of the last dangerous swine flu vaccine, which destroyed the lives of hundreds of people. Topping the whole mess off is the fact that if the new vaccine turns out to be a killer, the [pharmaceutical companies responsible are immune from lawsuits](#) -- something I've also warned about before on numerous occasions. Unfortunately, those prospects won't stop the governments of the world from [mandating the vaccine](#) -- a scenario I hope we can all avoid.

How to Protect Yourself Without Dangerous Drugs and Vaccinations

For now, my point is that there are always going to be threats of flu pandemics, real or created, and there will always be potentially toxic vaccines which are peddled as the solution. But you can break free of that whole drug-solution trap by following some natural health principles. I have not caught a flu in over two decades, and you can avoid it too, without getting vaccinated, by following these simple guidelines, which will keep your immune system in optimal working order so that you're far less likely to acquire the infection to begin with.

- [Optimize your vitamin D levels](#). As I've previously reported, [optimizing your vitamin D levels is one of the absolute best strategies for avoiding infections](#) of ALL kinds, and [vitamin D deficiency is likely the TRUE culprit behind the seasonality of the flu](#) -- not the flu virus itself. This is probably the single most important and least expensive action you can take. I would STRONGLY urge you to have your [vitamin D level monitored](#) to confirm your levels are therapeutic at 50-70 ng/ml and done by a reliable vitamin D lab like Lab Corp. For those of you in the US we hope to launch a vitamin D testing service through Lab Corp that allows you to have your vitamin D levels checked at your local blood drawing facility, and relatively inexpensively. We hope to offer this service by June 2009.

If you are coming down with flu like symptoms and have not been on vitamin D you can take doses of 50,000 units a day for three days to treat the acute infection. Some researchers like Dr. Cannell, believe the dose could even be as high as 1000 units per pound of body weight for three days. However, most of Dr. Cannell's work was with seasonal and not pandemic flu. If your body has never been exposed to the antigens there is chance that the vitamin D might not work. However the best bet is to maintain healthy levels of vitamin D around 60 ng/ml.

BUT to keep this in perspective, the [regular flu, not the swine flu, has killed 13,000 in the US since January](#). But there is strong support to show that these types of [figures are grossly exaggerated to increase vaccine sales](#). However, the fact remains that the regular flu at this point in time is FAR more dangerous than the swine flu and were you worried about the regular flu before the media started talking this up?

- [Avoid Sugar and Processed Foods](#). Sugar decreases the function of your immune system almost immediately, and as you likely know, a strong immune system is key to fighting off viruses and other illness. Be aware that sugar is present in foods you may not suspect, like ketchup and fruit juice.

- [Get Enough Rest](#). Just like it becomes harder for you to get your daily tasks done if you're tired, if your body is overly fatigued it will be harder for it to fight the flu. Be sure to check out my article [Guide to a Good Night's Sleep](#) for some great tips to help you get quality rest.
- [Have Effective Tools to Address Stress](#). We all face some stress every day, but if stress becomes overwhelming then your body will be less able to fight off the flu and other illness. If you feel that stress is taking a toll on your health, consider using an energy psychology tool such as the Emotional Freedom Technique (EFT), which is remarkably effective in relieving stress associated with all kinds of events, from work to family to trauma. You can check out [my free, 25-page EFT manual](#) for some guidelines on how to perform EFT.
- [Exercise](#). When you exercise, you increase your circulation and your blood flow throughout your body. The components of your immune system are also better circulated, which means your immune system has a better chance of finding an illness before it spreads. You can review my [exercise guidelines](#) for some great tips on how to get started.
- [Take a good source of animal based omega-3 fats like Krill Oil](#). Increase your intake of healthy and essential fats like the omega-3 found in krill oil, which is crucial for maintaining health. It is also vitally important to avoid damaged omega-6 oils that are trans fats and in processed foods as it will seriously damage your immune response.
- [Wash Your Hands](#). Washing your hands will decrease your likelihood of spreading a virus to your nose, mouth or other people. Be sure you don't use antibacterial soap for this -- antibacterial soaps are completely unnecessary, and they cause far more harm than good. Instead, identify a simple chemical-free soap that you can switch your family to.
- [Eat Garlic Regularly](#). Garlic works like a broad-spectrum antibiotic against bacteria, virus, and protozoa in the body. Unlike with antibiotics, no resistance can be built up so it is an absolutely safe product to use. However, if you are allergic or don't enjoy garlic it would be best to avoid as it will likely cause more harm than good.
- **Avoid Hospitals and Vaccines**. In this particular case, I'd also recommend you stay away from hospitals unless you're having an emergency, as hospitals are prime breeding grounds for infections of all kinds, and could be one of the likeliest places you could be exposed to this new bug. Vaccines will not be available for six months at the minimum but when available they will be ineffective and can lead to crippling paralysis like Guillain-Barré Syndrome just as it did in the 70s.

Update 9th July 2009

It has recently been publicly announced that the Japanese company Panasonic has instructed all senior Japanese company officials living abroad to sell their property and move back to Japan by September 2009. It seems clear that the Japanese government knows something very serious and which is not common knowledge. The following videos may shed some light on the matter:

<http://www.youtube.com/watch?v=xUvuQTD8FCI>
<http://www.youtube.com/watch?v=SBQh1D1-yJg&NR=1>

<http://www.youtube.com/watch?v=zqs5jEOTvg&NR=1>

<http://www.youtube.com/watch?v=hf8046ffXok&feature=related>
<http://www.youtube.com/watch?v=DvR8GNAYpNs&NR=1>

Jane Burgermeister, MA. Jane, who is an experienced science writer for prestige publications such as Nature, the British Medical Journal, The Scientist, Reuters Health, and The Guardian, with exceptional bravery, in April 2009, filed a series of criminal charges against Baxter, the World Health Organisation and others alleging attempted bio-terrorism with the intent to commit mass murder. The details of her charges can be seen here: <http://www.safetylawsuits.com/motion-prelim-injunction.html>

Although her case is based on solid fact, it is most unlikely that it will have much effect because the main media sources are heavily controlled by the people who are instigating this attack on the peoples of the world (and that includes you, personally). Her interview <http://www.youtube.com/watch?v=PeITWCUmTsU> gives you the full background details and allows you to assess her honesty and personality. You may not be aware of it, but it is planned to have mandatory, forced "inoculation" (actually, injection with the virus) for everybody, with no exceptions. This has already been arranged with the World Health Organisation taking direct charge of medical and police organisations in every country.

If you wish to support Jane in her campaign, you can do so via her website www.TheFluCase.com.
